1872.

THIRTY THOUSAND.

BARR & SUGDEN'S

DESCRIPTIVE SPRING CATALOGUE

OF

CHOICE SEEDS

FOR

FLOWER & KITCHEN GARDEN

WITH A COMPREHENSIVE AND CLASSIFIED LIST OF GLADIOLI, &c., FOR SPRING, SUMMER, AND AUTUMN FLOWERING.

SEED BULB&PLANT WAREHOUSE

BARR & SUGDEN,

12, KING STREET, COVENT GARDEN, LONDON, W.C.

"A useful manual for the amateur in the selection of flowers for the adornment of the garden, and vegetables for the use of the table."

[Contents, p. 75.]

an holomore

Presented with Barr aus Sugden's Compliments.

Immediate preceedings in Chancery will be taken against all infringements of the Copyright of this Work

SPECIAL NOTICES.

I. We prove the growth of our seeds before sending them out, and at our Experimental Grounds we test their purity and the relative value of varieties. Our trials of an experimental character are conducted on a very extensive scale, thereby enabling us to enrich each issue of our Catalogue with much practical information, which we are gratified to learn is found serviceable to the numerous customers to whom we have the pleasure annually of sending a copy of our Catalogue.

II. The crops of some kinds of seeds have this year been abundant, and reduction in the prices of such

has been made in consequence.

III. We shall not trouble our patrons with the customary, but we think supererogatory statement that we

execute our orders promptly and well, as this is the only way by which we can hope to satisfy our numerous correspondents, and to secure their good will and recommendation.

IV. Our Novelty List has, as usual, been carefully compiled. There are many things in it of sterling merit, and doubtless some with pretensions greater than a more intimate acquaintance with them will entitle them to. This refers equally to the new flowers and the new vegetables. As far as possible, we have avoided exaggerated descriptions, but as many of the things have not been seen by us, we have to accept the introducers' notes or their illustrations.

V. The Gladioli we present in an entirely new classified form to our readers, the result of four consecutive

years' careful collating.

VI. Thinking it would be interesting to the numerous readers of our Catalogue to know what success, in a Inhighing it would be interesting to the numerous leaders of our Catalogue to know what success, if a horticultural point of view, has attended the laying out of the Thames Embankment, one of the grandest undertakings of the age, we feel gratified in stating that the mixture of grasses we used in sowing down the Thames Embankment remained uninjured during the winter and throughout the summer. From Charing Cross Railway Station to Waterloo Bridge there was not a faulty patch. Of

summer. From Charing Cross Railway Station to Waterloo Bridge there was not a faulty patch. Of the shrubs and trees which were planted in spring, more than an average number survived, while the ivy edging promises next summer to equal anything to be seen in the city of Paris. The flowers planted for summer decoration more than realized the expectations of the public, and it is anticipated that the display of flowers in spring will be good. See illustration, page 68.

VII. To the seedsman the extension of horticultural knowledge is all important in the development of his business, hence the care with which he compiles his catalogue, and as far as the limitation of the pages of a trade circular will admit, embodies information which, as a rule, could not be culled from any other source. To us, therefore, it is a pleasing duty to announce the addition to gardening literature of a new illustrated weekly iournal, which is the fourth that empartes from London, all ably conducted. new illustrated weekly journal, which is the fourth that emanates from London, all ably conducted. There is the Gardeners' Chronicle, the Journal of Horticulture, and the Gardeners' Magazine, each with a large weekly circulation. The new publication is entitled "The Gardeners' profusely illustrated,

and written in a popular style, and well suited to lay on the drawing-room table of every home of taste.

VIII. Our Floral Albums (four volumes super-royal) contain above 5000 coloured plates of Bulbous and

Tuberous-rooted Plants, Annuals, Perennials, Stove and Greenhouse Plants, Ferns and Ornamental foliage Plants. We keep constantly adding plates of new plants, as these appear in the various works

devoted to gardening.

IX. The Albums are kept at our warehouse as books of reference for the use of those of our customers who wish to refer to them when in London.

X. Carriage is allowed on orders amounting to 21s. and upwards, to any principal Railway Station in England and Wales, to Edinburgh and Glasgow, and to any principal Station on the North British, Caledonian and Scottish Central Lines. Also to Dublin and Belfast. To Cork and Waterford, by steamboat from London, or as far as Bristol by railway, en route for Ireland. We prefer the latter

route, being more expeditious, and unless instructed otherwise, we shall forward via Bristol.

XI. Carriage to be deducted at settlement (in accordance with Par. X.) Formerly our custom was to pay carriage in London; but we were compelled to relinquish this practice, in consequence of our "Carriage Paid" packages not being delivered with the same promptitude as those not prepaid; and, also, on account of continual complaints from our customers that they also had to pay carriage before they could get the goods. We mention this as the reason why we abandoned a practice followed by us for so many years.

XII. Orders which are paid in advance (in accordance with Par. X.), will either be sent carriage paid, or a liberal equivalent in goods will be added. The latter course will be adopted unless we are otherwise

instructed.

XIII. Seeds which are sold by us and quoted in the Catalogue as at "per packet," are forwarded post paid;

or if sent by rail, however small the amount, the carriage to be deducted at settlement.

XIV. No charge is made for the packing or the package, except in the case of Plants, Seed Potatoes, Asparagus, Seakale, and Rhubarb. A small charge will be made in these cases for the mat, hamper, etc.,

ragus, Seakale, and Rhubarb. A small charge will be made in these cases for the mat, hamper, etc., and, if returned, half-price will be allowed.

XV. Fruit and Forest Trees, Soils, Wirework, Plant Cases and Stands, Chapman's "Multum-in-Parvo" Exhibitors' Cut Flower Cases, Barr's Portable Cut Flower and Bouquet Transmission Cases, Garden Engines and Water Barrows, Flower Boxes, Jardinets, and Terra-Cotta, Rustic, China, and Glass goods—on these we do not allow carriage, and the packages are charged.

XVI. Five per cent. is allowed on all payments made within one month from date of invoice.

XVII. Post Office Orders to be made payable at King-street Post Office, Covent Garden, W.C. All cheques to be crossed, adding the words "and Co." Small amounts may be paid in Postage Stamps.

FOREIGN AND COLONIAL NOTICES.

XVIII. To insure attention, orders must be accompanied with a remittance, a draft, or an "order to pay," on a London agent. The remittance must be sufficient to cover the expense of cases, and also of carriage, as when the freight is not paid in advance a heavy percentage is added to it by the Peninsular and Oriental Company and their agents.
 XIX. We pay postage on all "PACKETS" of Flower Seeds sent to India and the Colonies, (provided the present restriction recently imposed by the Postal Authorities on merchandise at sample post rates be received on the process.

rescinded or not enforced.)

XX. In shipping plants to India, great care is exercised by us in selecting, preparing, and properly packing the same, and our consignments have, on the whole, been very successful. Still, there are so many contingencies, that we cannot, in any way, hold ourselves responsible for the condition in which the plants reach their destination.

XXI. Our successful shipments of seeds to India have led to several of the Agricultural and Horticultural Societies there intrusting us with the execution of orders for distribution amongst their members.

NOVELTIES AND SPECIALITIES FOR 1872.

Very few of these are enumerated in the body of the Catalogue.

	and the state of t		
	B. & S. TEST THE GROWING QUALITY OF THE SEEDS BEFORE SENDING THEM OUT.		
	The Court of the C	Per	pkt.
1	1 ACTINELLA SCAPOSA, a charming hardy perennial of the Composite family, producing dwarf Armeria	-	
0	like tufts of linear-lanceolate silvery-grey foliage; 2 to 3 inches long, flowers in succession from early		
	summer to a late period in autumn	. I	
	3 AGARISTATA CALLIOPSIDIA. This plant for the last two years has been sold under the name Leptosyne	e	
	maritima. It is a most desirable and very showy fragrant hardy annual, with delicate lemon-coloured		6
4	flowers, 1½ ft. 4 AGERATUM ARGENTEUM; described as having long white leaves, blue flowers, and being distinct and	i	0
	pretty	. T	0
	5 AGERATUM IMPERIAL DWARF. This plant cannot be too highly recommended. Its fine compact graceful habit, rich azure-blue colour, and profuse blooming, entitle it to a first place for bedding		
8	height I ft	2	6
	s AGERATUM INCARNATUM NANUM, described as an exquisite dwarf variety, blooming during the winter, and valuable to cut for bouquets	9	0
9	7 AGERATUM LIMENROTHI, described as having charming blue flowers, far excelling A. Mexicanum	I I	0
8	AGROSTEMMA CORONARIA ATROSANGUINEA, a new variety of the Rose Campion; flowers purplish	1	
0	crimson, which, in combination with its silvery foliage, make it an important addition to our her baceous plants, 2 ft.	. I	0
9	AMARANTHUS ATROPURPUREUS. This species is from Calcutta, and is described as the most remark.	-	
	able of the Amaranthus. "Imagine," says the introducer, "a mass of branches springing from the root, divided and subdivided in hundreds of stems, each terminating in a long cylindrical drooping		
1	raceme of the brightest purple, and you have an approximate idea of this fine acquisition. The		
IN	leaves are small and nearly hidden by the mass of bloom. The tout ensemble of the plant may be		-
10	compared to a burning sheaf," height 3 ft., diameter 1½ ft	2	0
	guishable from it in the stems being more rugged, the leaves being very long and well furnished, of a	ı	
	dark purple; the centre or terminal leaves are in the form of rosettes of a bright blood-red colour the effect is unique, height about 3 ft	;	6
11	AMARANTHUS SALICIFOLIUS. The late Mr. John Gould Veitch brought seed of this remarkable		0
6	annual from the Philippine Islands. The plant is of pyramidal growth, attaining a height of about		
	3 feet, branching close to the ground; the lower branches being from 10 to 15 inches in length, and extending in a horizontal position, the leaves being beautifully undulated, narrow, and, as its name		
	indicates, willow-like. When in perfection the foliage is of a bright orange-red, forming plumes of	f	
	the most elegant and picturesque appearance. We have seen no plant which will bear comparison with this in pots, for the decoration of the conservatory or dinner-table, or for the flower-garden, and		
	the centres of beds; also for grouping in beds cut out of the grass, the rich green of which will throw	r	
BA.	up the colour of the Amaranthus, so that, with the sun's rays upon the plant, it would be almost impossible to conjure up an effect so fine; in such a position the plant would look like garnets set in		
	emerald	2	6
12	AMARANTHUS TRICOLOR GIGANTEUS, a Cochin China species, resembling A. tricolor, but more majestic; as the plant developes, the black-purple and green of the leaves change, and ultimately pre-		
0	sent an effect of bright scarlet and yellow, height about 4 feet	I	0
13	sent an effect of bright scarlet and yellow, height about 4 feet		-
14	the cream of the Indian Flora	2	6
	leaves, and terminating in a large corymb of silvery-white everlasting flowers; a fine pot plant, I ft.	I	0
10	AQUILEGIA CALIFORNICA ROSEO-ALBO PLENISSIMA, rose with white centre, charming variety, height 2 ft.		0
16	ARALIA SACHALIENSIS, a hardy herbaceous ornamental magnificent foliage plant from Siberia: the		
18	fern-like beautiful pinnate-decompound leaves are of gigantic size; a noble addition to our hardy fine foliage plants. For beauty and general usefulness it rivals the well-known Bocconia japonica	I	0
17	ARTEMISIA PONTICA, a hardy perennial, growing in dense bushes I ft. in height, foliage tomentose,		
18	finely cut, and of a silvery-green colour; very neat edging plant	I	0
l a	surface, and with flowers of the Pæony Perfection type	2	6
19	ASTER, BOUQUET ELEGANTISSIMA ROSE; a new colour in this fairy section of Asters	2	6
21	ASTER HORIZONTALIS, a North American Alpine species, a perfectly hardy perennial, flowers pure	1	0
	white, with bright crimson-scarlet very profuse flowering	I	0
23	ASTER, IMPROVED ROSE, azure blue, red-lilac and white; separate or in mixtureeach ASTER, NEW VICTORIA HONEYCOMB, CARMINE ROSE, an exquisite introduction, flowers the	2	6
	most periect; nabit, a graceful pyramid	2	6
	ASTER, NEW VICTORIA QUILLED, BRILLIANT CARMINE; its habit is that of a beautiful pyramid, while the flowers are exquisitely quilled	2	6
25	ASTRAGALUS MARIANUS. Roezl found this hardy herbaceous perennial in Texas, at an elevation		
26	of 6000 ft.; flowers lilac, foliage white and silky, height $1\frac{1}{2}$ ft	I	0
10	beauty and effect for flower-beds, but especially for ribbons and long lines; the leaves rich crimson.		
	upright and slightly arched, of uniform growth; when lit up by the sun's rays their refulgent, rich, luminous beauty can only be realized when seen in position		
27	BEGONIA BULIVIENSIS	I	0
23	BEGONIA PEARCEII These new Begonias are of the first importance, ornamental	I	0
30	BEGUNIA SEDENEI folioge	2	6
31	BEGONIA VEITCHII	2	6
	BEGONIA ECHINOSEPLA, a half shrubby species from Santa Catarina, forming handsome well-branched bushes, with obliquely heart-shaped leaves, which above are glossy light green, and		
14,	underneath purple; flowers white, disposed in umbel-like panicles, flowering profusely throughout		31
Pig	the summer; considered an extremely handsome novelty	2	6

	The same and the s	8.	
108	PHLOX DRUMMONDII AMABILIS, deep rose, dark centre PHLOX DRUMMONDII FORMOSA, purplish scarlet, black eye	1	6
110	PYRETHRUM GOLDEN FEATHER. This plant, we feel, cannot be placed too prominently before our	A	0
	readers. It is truly the gardener and amateur's friend, always to be depended upon whether in		
	the formation of the most minute and elaborate designs or for edging or ribboning on the most extensive		
	scale. It is only a question of having plants of the right size, and this is to be attained by repeated		
	sowings. It is perfectly hardy, and in the spring flower garden the hue is so golden as to suggest to one's mind that, in passing through Nature's laboratory, the precious metal had been freely		
	used in imparting to this plant a colour so like the refined auriferous metal of other lands6d., 1s., &	2	6
111	RIVINA HERBACEA. This plant has been introduced from South America; the flowers are insigni-		
	ficant, but are succeeded by bright red berries, which impart a very pretty effect. The plant is recommended for pot culture, and will be prized for table decoration, height 1½ ft	_	
112	SALPIGLOSSIS NIGER, described as "decidedly black, and of a distinct character; very decorative for	1	0
110	pots, and for the flower garden '	π	Q:
113	SALVIA CAMPHORATA, another of Roezl's American plants; the leaves said to be as white as those		
	of Centaurea candidissima, which will make the plant valuable as a contrast in shrubbery borders,		
	and for intermixing with herbaceous plants. The leaves, when handled, emit a strong camphor odour, height 5 ft.	-	0.
114	SCABIOSA MAJOR COMPACTA ATRO-PURPUREA. The habit of this plant is elegant, being com-	1	O
	pact and more erect than the older variety, producing abundance of velvety dark purple flowers, 6d. and	I	0.
115	SCABIOSA NANA STRIATA FLORE PLENO, a very beautiful striped variety of the new large-flowered		
116	Dwarf Scabiosa, a beautiful plant for flower-beds and borders SEDUM MAXIMOWICZII, a perfectly hardy biennial from Japan, forming large dense heads of yellow	I	C,
	flowers height 11 ft	т	0
117	SOLANUM HÆMATOCARPUM. This Brazilian plant resembles in all respects S. pyracanthum, the	-	0.
	Fire-Thorn of Madagascar, but the flowers are purple, white inside, and twice as large, and are suc-		
	ceeded by the richest blood-red berries. For conservatories and table decoration the plant will be		
118	ornamental, and will be found valuable where a select sub-tropical effect is aimed at, height 3 ft STOCK, LARGE-FLOWERED TEN-WEEK, BRILLIANT CRIMSON ROSE, colour rich and distinct, and	1	0
	flowers very double	2	6
119	STOCK, NEWEST VICTORIA TEN-WEEK, described as "a magnificent new class; from one common		
	calyx come two distinct globular flowers, and these are formed into large, dense flower-spikes; the		-
120	plant is very robust, compact, and branched, crowded with rocket-like trusses of flowers"	2	0,
	will readily appreciate one which will produce pure white flowers 6d and	I	0
121	TELLANDSIA GIGANTEA. Mr. Roezl discovered this species on the western range of the Cordilleras		
	of South America, at an altitude of 4000 feet, and describes it as a scarce plant in its native district,		
	and of gigantic size, throwing up flower stems 14 feet in height, and presenting a pyramid of flowers 10 to 12 feet in length 15 and	2	6.
122	TROPEOLUM TOM THUMB, BRONZE, another addition to a most important class of dwarf Nastur-	_	O,
	tiums, which supplements our bedding plants when there is deficiency or failures. and	2	6
123	VERBENA HYBRIDA ROSEA, described as "the most charming and richly flowered of the Verbenas		,
194	now in cultivation; of a very compact dwarf habit, and comes true from seed "	2	6
101	highly of this charming plant, blooming continuously throughout the spring and summer		
	months Is and	2	6
125	VIOLA LUTEA MAJOR, the largest of the yellow Violas, and a mass of golden blossom from the		_
126	earliest period of spring till autumn	2	6
	bouquets 6d and	I	C
127	ZAUSCHNERIA SPECIES: Roezl found this on the Sierra Nevada. It grows in nice round tufts,		
	which are covered with bright scarlet flowers	2	6
128	ZINNIA HAAGEANA FLORE PLENO. This is a double form of the beautiful Zinnia Mexicana so much admired. It is a novelty of great merit; besides its decorative effect in the flower-garden, the		
	flowers will be valuable to cut for bouquets; they are of a beautiful deep orange, finely margined		
	with deep golden yellow	2	6
129	ZINNIA HAAGEANA GRANDIS. This is a variety of the single Zinnia Mexicana, but nearly twice		
	the size in all its parts; a valuable decorative border plant	I	0
	ADDENDUM OF SEEDS NOT EMBODIED IN CATALOGUE.		
120			,
	ACANTHUS LONGIFOLIUS , a fine species, leaves about $2\frac{1}{2}$ ft. long, height $3\frac{1}{2}$ ft. ACONITUM SINENSE , flowers intense bright blue, a stately plant, 4 to 6 ft.	0	6
132	ANCHUSA ITALICA, a grand plant for naturalization and semi-wild places, 4 ft.	0	3
133	ANTIRRHINUM MULTIFLORUM, a fine variety, densely covered with rose and white flowers, \frac{1}{2} ft	0	6
134	APOCYNUM ANDROS EMIFOLIUM, flowers pale red, emitting a grateful perfume, and trapping great		6
135	numbers of flies, a curious plant, worthy of cultivation ASTRANTIA CARNIOLICA, flowers pink striped and in umbels, an exceedingly effective plant	0	6
136	BLITUM CAPITATUM (STRAWBERRY SPINACH), a nice plant for rockwork	0	3
137	CACALIA COCCINEA, this seed, when brought under the microscope, is full of interest	0	3
138	CAMPANULA ZOYSII, a most charming Alpine Campanula, with deep blue flowers, \(\frac{1}{2}\) ft	0	6
733	C. Carpatica, \(\frac{1}{4}\)ft.	0	6
140	CEPHALARIA TARTARICA, a majestic plant for semi-wild situations, 4 ft.	0	
141	CHAMÆMELUM SERRATIFOLIUM, a fine rock plant, with a powerful aromatic odour, \(\frac{3}{4}\) ft	0	36
	CLEOME INTEGRIFOLIA, an effective plant, with smooth trifoliate leaves, and small violet flowers		6
144	COCCOCYPSELUM DISCOLOR, a very interesting stove plant for hanging baskets DIANTHUS CRUENTUS, a very effective species, with large heads of blood-red flowers, 1½ ft	1	6
145	DIANTHUS SYLVESTRIS, a fine perennial species, with red flowers, 1 ft	0	6
146	DIGITALIS GRANDIFLORA, the large-flowered, yellow Foxglove, 3 ft.	0	6
147	DRABA AIZOON, a charming little Alpine, clothed with golden yellow flowers, \(\frac{1}{4}\) ft	0	6
149	DRYAS OCTOPETALA, a fine recumbent, close-growing rock plant, with large white flowers EPILOBIUM DADONÆI, a showy border plant with deep rose flowers, 1½ ft.	0	6
150	ERODIUM MANESCAVI, a charming plant for borders and rock-work, with magenta-rose flowers	0	6
151	FUNKIA MARGINATA, a fine border plant, prized equally for its flowers and foliage	0	6
152	GERANIUM LANCASTRIENSE, a fine plant for borders and rock-work	0	6
154	GRINDELLIA HIRSUTULA, a fine border plant with beautiful glossy yellow flowers, 11/2 ft. HIERACEUM AURANTIACUM, a fine distinct dwarf Composite plant, deep orange, 1 ft.	0	6
	and the state of t	0	0

	12, King Street, Covent Garden, 1872.]	Per p	
	155 INULA HELENIUM (ELECAMPANE), a fine border plant with elegant foliage, 1½ st. 156 JASIONE HUMILIS, a nice little Alpine plant, flowers blue, ½ st. 157 LATHYRUS VENOSUS, a fine climber, with white and red flowers 158 LEUCOCARPUS ALATUS, a winter-berrying slove plant	0 0	6 6 6
	159 LOPHANTHUS ANISATUS, a fine herbaceous plant with blue fragrant flowers 160 LYCHNIS VISCARIA ALBA, a fine herbaceous plant for the flower border, 1 ft.	0	6
	161 MALVA ALCEA, a strong growing perennial with rosy purple flowers, a fine border plant, 3 ft		6
	163 MUSSCHEA WOLLASTONII, a fine campanulaceous plant with pale yellow flowers, h. h. p., 21 ft	0	6
	165 ONONIS NATRIX, flowers yellow, veined red, suitable for banks and flower borders, 1) ft	0	6
	166 ONOPORDON ACAULE, a dwarf thistle, with purple flowers, height ½ ft	I	3

ASTERS.

In our Experimental Grounds we have grown a complete collection of the Asters offered by continental growers, and those we enumerate were selected by us as the most suitable for English gardens. For large beds, the Pæony Perfection, Hamburgh Prize Pæony Perfection, Victoria, Cockade, and Improved Hedgehog, are the most desirable. For medium-sized beds, ribbons, etc., the Dwarf Chrysanthemum, Dwarf Victoria, and the Sabillar Dwarf Purantial and the finest height dwarf compact and of more growth beging their flowers con-

Schiller Dwarf Pyramidal are the finest, being dwarf, compact, and of even growth, bearing their flowers conspicuously. To cut for bouquets, the Imbrique Pompon, and Dwarf Bouquet Elegantissima, are the best adapted, their flowers ranging from the size of a florin to that of a five shilling piece, perfect models in shape, and exquisite in colour. Hamburgh New Prize Pæony Perfection Aster, height 13 ft. The varieties in this collection are of the highest type of the Paony Aster as recognized by the Royal Horticultural Society. The habit of the plant is excellent: the flowers are remarkable for their fine quality and perfect form, their large size, and rich and pure colours. For exhibition purposes they are unquestionably the best, having, at the Hamburgh Exhibition of 1869, received the prize for Paony Asters. Truffaut's Pæony-flowered Perfection Aster, height 13 ft. New Victoria large flowered Imbrique Aster, height 12 ft. It would be impossible to speak too highly of this most magnificent Aster, flowers large, perfectly double, imbricated and globular, habit that of an elegant pyramid, with from 10 to 20 flowers on a plant.

An attractive section, each flower having a large white centre, surrounded with purple, crimson, lavender, rose, or brownish-purple petals, and these again resting on a green fringe, produce a fine effect. New Perfection Pyramidal Hedgehog Aster, height $\mathbf{1}_{2}^{1}$ ft. The "Schiller" New Pyramid Bouquet Perfection Aster, height 14 ft.

This exquisite new Aster greatly excels in elegance and regularity of habit the old Pyramid Bouquet. Truffaut's New Dwarf Chrysanthemum-flowered Aster, height 10 in. This Aster grows to the uniform height of 10 inches, with flowers 3 to 4 inches in diameter, and produced in such profusion as entirely to hide the foliage; it flowers later than the other Asters, and is a valuable succession for autumn-flowering in beds, ribbons, or in pots. Dwarf Bouquet Elegantissima, height 6 in. The Lilliputian of Asters, but by no means insignificant; the colours are the most charming, the shape of the flower the most perfect, and the habit the most desirable; a perfect gem for small beds.

	These are universal favourites, and of considerable value in the flower garden. The dwarf varieties are	06	.1

These are universal favourites, and of considerable value in the slower garden. The dwarf varieties are very effective in beds and ribbons; the taller growing kinds are exceedingly decorative in mixed slower and shrubbery borders, and to cut for bouquets and vases they are invaluable. On light soils, where plants get burnt up in summer, we recommend that these be sown in autumn. So treated they will bloom throughout the whole summer in spile of the severest drought, and cut slowers may be gathered freely from them the whole of the season.

COLLECTIONS OF CHOICE CARNATION AND PICOTEE SEEDS.

Saved from the following classes by "Our Sardinian Correspondent," and distinguished by his Seal, thus and initialled, G. E. S.

These seeds have been saved from one of the finest collections in Europe, and yield about 80 per cent. of splendid double flowers, surpassing in floral beauty, rich and brilliant colours, those sold by German, French, or Belgian cultivators.

Carnations and Picotees are prized for their delicious fragrance and exquisite beauty; as cut flowers, they are indispensable for furnishing flower-baskets and drawing-room bouquets, and for this purpose a reserve piece of ground should be devoted to their cultivation, and as plants from seed bloom more profusely than from cuttings, we recommend the following collections saved from the classes noted, but there is no reliance upon the specified colours being reproduced.

CARNATIONS, SECTION I.

This section consists of Four Collections, each forming a distinct feature.

- Coll. A .- SELFS .- One-coloured .- 12 superb varieties of 10 seeds each, 3/6. The flowers of these possess the delightful perfume of the old and highly-prized C.ovc.
- Coll. B.-FLAKES.-Two-coloured.-12 superb varieties of 10 seeds each, 3,6. The flowers are either white or of some other hue, striped or flaked with a distinct and brilliant colour.
- Coll. C.—BIZARRES.—Three-coloured.—12 superb varieties of 10 seeds each, 3/6.

 The flowers are either white or of some light shade, striped with two distinct and brilliant colours. 434
- 435 Coll. D.—FANCY.—Parti-coloured.—12 superb varieties of 10 seeds each, 3/6. The flowers are either shaded, spotted, or mottled, with rich and peculiar hues.

YELLOW CARNATIONS, SECTION II.

This Section comprises Three Collections which on account of the colour of the flowers, are universally admired and extensively grown.

- Coll. E.—YELLOW FLAKES.—Two-coloured.—12 superb varieties of 10 seeds each, 4/0.

 The flowers are either yellow or orange, striped or flaked with a distinct colour, as purple, scarlet, etc.
- Coll. F .- YELLOW BIZARRES AND SELFS .- 12 superb varieties of 10 seeds each, 4/0. The flowers of the Bizarres are either yellow or orange, striped with two distinct colours.
- 438 Coll. G .- YELLOW FANCY .- Parti-coloured .- 12 superb varieties of 10 seeds each, 4/0. Yellow exquisitely variegated with every tint of the rainbow.

PERPETUAL OR TREE CARNATIONS, SECTION III.

This Section, consisting of Four Collections, is much sought after for conservatory decoration. The plants can easily be had in bloom, under glass, from November till May.

- Coll. H.—SELFS.—One-coloured.—12 fine varieties of 10 seeds each, 3/6.
 Coll. I.—FLAKES.—Two-coloured.—12 fine varieties of 10 seeds each, 3/6.
 Coll. J.—BIZARRES.—Three-coloured.—12 fine varieties of 10 seeds each, 3/6.
- 441
- Coll. K.-FANCY.-Parti-coloured -12 fine varieties of 10 seeds each, 3/6.

PICOTEES, SECTION IV.

The Picotee is distinguished from the Carnation by the flowers being PURE WHITE OR YELLOW, etc., elegantly margined or fringed with scarlet, purple, rose, carmine, crimson, vermilion, etc. This Section includes Three Collections.

- 443 Coll. L.—WHITE GROUND, VARIOUSLY MARGINED.—Contains 12 superb varieties of 10 seeds each, 3/6.
- 444 Coll. M.—YELLOW GROUND, VARIOUSLY MARGINED.—Contains 12 superb varieties of 10 seeds each, 4/0.
- Coll N .- PERPETUAL OR TREE; WHITE VARIOUSLY MARGINED .- Contains 12 fine varieties of 10 seeds each, 3/6.

PELARGONIUM (GERANIUM) SEED.

Saved by our "SARDINIAN CORRESPONDENT" from the following classes, which include some of his newest varieties, and also the best English and French, carefully hybridized, to ensure the amateur against disappointment.

SEALED COLLECTIONS OF PELARGONIUM SEED.

446 COLLECTION O (3s. 6d.)

Contains 12 splendid varieties, 10 seeds each, of Diadematum Pelargoniums.

447 COLLECTION P (3s. 6d.)

Contains 12 splendid varieties, 10 seeds each, of fancy Pelargoniums.

448 COLLECTION Q (3s. 6d.)

Contains 12 splendid varieties, 10 seeds each, of large-flowered Pelargoniums.

449 COLLECTION R (3s. 6d.)

Contains 12 splendid varieties, 10 seeds each, of spotted Pelargoniums.

450 COLLECTION S (3s. 6d.)

Contains 12 splendid varieties of Zonale and Nosegay Pelargoniums.

451 COLLECTION T (55. 6d.)
Contains 12 splendid varieties of French Zonale Pelargoniums.

The following were saved for us by eminent and well-known successful English hybridizers:-452 In mixture, Zonales, crossed with Tricolors of the newest and best varieties, 2s. 6d., 3s. 6d., and 5s. 6d.

Zonales 2s. 6d., 3s. 6d., and 5s. 6d.

CUCUMIS AND CUCURBITA, Nat. Ord. Cucurbita'ceæ.

PICTURESQUE, CURIOUS, INTERESTING, AND BEAUTIFUL, ARE THE ORNAMENTAL GOURDS AND CUCUMBERS OF OUR INTERNATIONAL EXHIBITION FIRST PRIZE CONTINENTAL COLLECTION.

The Fruit Committee of the Royal Horticultural Society in the autumn of 1868 also awarded to us a First Class Certificate for our collection of Ornamental Gourds grown at our Experimental Grounds, from seed sown in open ground, and simply thinned out, thus proving that the average general temperature of our English summers is sufficient to mature these.

The varieties in this collection have been selected either for the highly ornamental character of their foliage, the singularity or exquisite symmetry of their fruit, or for the richness, variety, and peculiarity of their colouring; some are perfect monsters in size and oddity of shape, while others are miniatures of most elegant formation. The colours range from white to crimson, orange and scarlet, blending and harmonizing with olive green, bronze, and the most beautiful bright polished glossy green; these again are striped, spotted, dappled, or variegated in the most extraordinary manner; others, being self-coloured, are distinct and beautiful. The style of growth is as diversified as the size of the fruit; some are of gigantic growth, others are slender and delicate, and these latter are invaluable for covering arches, verandahs, trellis-work, or for the fronts of villas and cottages, where trained round the windows they are exceedingly ornamental, and in autumn their rich and parti-coloured fruits are remarkably picturesque. The strong growers are invaluable for training to trees over summer retreats, and arbours, or trailing on large rockeries and rooteries, sloping banks, by the margins of ponds, woodland walks, and amidst ruins. On extensive lawns and park scenery, and in orchards, etc., where it is desirable to diversify the scenic effect without obstructing the distant prospect, large beds of these form massive mounds of green, which in the distance are very pleasing to the eye.

The fruits when ripe make the most splendid and interesting hall and drawing-room autumnal and winter

ornaments, and recently they have been in demand for church decoration, where a Harvest Home is held in connection with All Saints' Festival.

We can supply, to any one desirous of cultivating a collection of these, 500 varieties, most of which have been described in previous editions of our Catalogue.

THE PRIZE GIANT OR LARGE-FRUITED GOURDS.

These, in addition to being highly ornamental, are in demand for cattle food, the seed planted early in May where intended to grow.

ORNAMENTAL GRASSES,

For Winter Bouquets, Dinner-Table Decorations, Edgings, Ribbons, Centres of Beds, Sub-tropical Gardens, Islands, Select Plantations, Shrubberies, the Sides of Rivulets, Ravines, Lakes, etc.

It is scarcely possible to over-estimate the decorative qualities of Ornamental Grasses for the flower-borders and shrubberies; some of them are curious-looking plants, others exceedingly graceful; some are neat and compact, while others are stately and majestic.

In their cultivation the plants should be so thinned out as to allow for individual development.

All the grasses may be gathered and dried for winter decoration; but as some are better adapted for that purpose than others, we recommend the collection we offer for "Winter Bouquets."

The varieties enumerated have been flowered in our Experimental Grounds, and are those which we have

selected as most desirable for the purposes above-named.

In some establishments a special piece of ground is devoted to Ornamental Grasses, and we have known in such places these GRASS GARDENS to be a source of greater interest to visitors than the flower garden with all its charms.

531 Collections suitable for Flower Border Decoration, 30 varieties, 7/6; 20 ditto, 5/6; 15 ditto, 3/6; 10 ditto, 2/6.

for Edgings, 10 varieties, 2/6; 6 ditto, 1/6.
for Shrubberies, etc., 30 varieties, 7/6; 20 ditto, 5/6; 15 ditto, 3/6; 10 ditto, 2/6.
for Winter Bouquets, 30 varieties, 7/6; 20 ditto, 5/6; 15 ditto, 3/6; 10 ditto, 2/6. 532 533 99 53 534 99 99 535 for Sub-tropical Gardens, 15 varieties, 4/6; 10 ditto, 3/6.

All the grasses flower the first season, and most of them continue for two or more years. They may either be sown where intended to bloom, or in pots, and transplanted when about two inches high.

FIRST SECTION.—Most of this section are useful for bouquets, and all are suitable for the flower border.

BARR & SUGDEN, AGENTS FOR ENGLAND.

VILMORIN'S ATLAS OF FLOWERS.

Price 7s. 6d.; by Post, 8s.

The Atlas of Flowers contains nearly 1,200 Illustrations (uncoloured) of Popular Plants, including many of those offered in B. & S.'s Catalogue. It is the most comprehensive work of the kind which has yet been offered, and every Amateur would do well to possess a copy, as it will be of great service in indicating the right places for the right plants.

B. and S. test the growing quality of the Seeds before sending them out.

THE AMATEUR'S HEATED FRAME FOR RAISING THE MOST DELICATE, AND THE HARDEST SEEDS, FOR STRIKING CUTTINGS, AND PRESERVING CHOICE PLANTS IN WINTER, IS FULLY DESCRIBED AND ILLUSTRATED, p. 69.

A SELECT

DESCRIPTIVE LIST OF FLOWER SEEDS,

TREES, SHRUBS, ORNAMENTAL FRUIT, AND FOLIAGE PLANTS.

The Climbers and Twiners are arranged in a separate List, p. 47.
For a Special List of Novelties, including many rare and beautiful Introductions, see p. 3.

DIRECTIONS FOR GROWTH AND MANAGEMENT PRINTED ON EVERY PACKET OF SEED.

All Packets of Flower Seeds sent post-paid,

* * In ordering, it will be sufficient to quote the Marginal Numbers and date of Catalogue.

	*	In ordering, it will be sufficient to quote the Marginar Ivamoers and dute of Catalogue.

1s. & 2

Asari'na, yellow, valuable for rock-work, hanging baskets, and pots, \(\frac{1}{2}\) ft.

assur'gens, flowers white tinted yellow, a fine rock-plant, \(\frac{1}{2}\) ft.

rupes'tris, purple and yellow, a charming dwarf rock-plant, \(\frac{1}{2}\) ft.

al'ba ple'na, fine double, white, 2 ft.

alpi'na, blue and white, 1 ft.

califor'nica, bright scarlet, large and beautiful, 2 ft.

canquen'sis ro'sea gigan'tea, rose, 2 ft.

caryophylloi'des, double, magnificently striped varieties, 2 ft.

cœru'lea, violet-blue and white, long spurs, fine species, 14 ft.

Duran'dii variega'ta, dvuble striped, 1½ ft.
sibir'ica compacta rubra violacea plena, reddish violet, double, 1 ft.

Skinne'rii, scarlet and yellow, beautiful, 1½ ft. Vervainea'na, semi-double purple, foliage beautifully mottled yellow, very effective, 1 ft.

Witmannia'na, blue and white, very handsome, 11/2 ft.

Of plants used for giving a sub-tropical effect in the flower garden or conservatory, Aralias rank foremost. Their handsome and

distinctive foliage at once attracts attention and excites admira-

tion when seen planted in groups, or as single specimens, as at Battersea Park, the Lower Grounds Aston, and other public

places where sub-tropical gardening is made a feature.

A'RABIS, Nat. Ord. Crucif'eræ. Valuable spring-flowering hardy perennials. A'rabis albi'da, pure white, \(\frac{3}{4}\) ft.\\ Indispensable and exceedingly effective plants for spring \(\frac{3}{4}\) dt.\\ areno'sa, fine rose, \(\frac{3}{4}\) ft.\\ gardening, and very decorative on rock-work.....\\ \(\frac{6d}{6d}\).\&

ARA'LIA, Nat. Ord. Aralia'ceæ. Highly ornamental half-hardy shrubs.

APLOPAP'PUS, Nat. Ord. Compos'ite. A showy hardy annual. 1842 Aplopap'pus rubigino'sus, golden yellow, a very profuse autumn-flowering plant, 2½ ft. o 6 AQUILE'GIA (Columbine), Nat. Ord. Ranuncula'ceæ. Handsome hardy perennials. Valuable border and rock plants, exceedingly effective during May and June. Aquile'gia choice mixed double varieties 3d. and , , , , single , , 3d. and

Duran'dii variega'ta, double striped, 12 ft.....

viscosa, purple, 1½ ft. .

Ara'lia Japon'ica, 4 ft....

	CAN'NA, Nat. Ord. Maranta'cew. Highly ornamental half-hardy perennials. Scientific gardening has reached an epoch when sub-tropical or Leaf Gardens in any part of the	thras
	doms are no longer a chimera. It is simply a question of the right place for the plants, and the right place, and the treatment necessary to ensure success. In this style of gardening, the Canna must	
saril	y take the prominent position: possessing, as it does; picturesque foliage, varied both in form and co	lour,
with	a chasteness yet boldness of outline peculiar to itself, and which renders it at once pleasing to the dious, and an equally agreeable associate with either shrubs or flowers.	most
	Although we have alluded only to the foliage of these plants, the howers are by no means to be despect, some of them are exquisitely beautiful.	rised;
-	A stock of Cannas is easily secured. Sow the seed early in spring, in a strong moist heat, and they w	ill be
	ative the first season; or sow them later, and they will make nice rhizomes for another year. Most of the following may be seen at Battersea Park in perfection:—	
2065 2066	Can'na An'nei, handsome long green foliage, 6 ft. ,, ro'sea, purple stems, handsome green foliage, margined maroon, 5 ft	0 6
2067 2068	,, super'ba, fine bright green foliage, 5 ft.	0 6
2069	,, atro-ni/gricans, large dark handsome foliage (new), 4 ft	0 6
2070 2071	,, Bihorel'li, dwarf variety, with fine dark-shaded foliage, 3 ft	0 6

D. sinensis (Chinese or Indian Pink, as it is sometimes called) ranks foremost in bedding plants from seed. Raised early in spring under glass, potted on and planted out, it is in bloom in June, and will continue covered with flowers till late in autumn, if a little attention is paid to it. Some of the finest effects in our Experimental Grounds have been produced by the varieties of Imperialis, Heddewiggii, Laciniatus, and Nanus. If seed is sown in autumn the plants stand the winter, and in summer each plant will form a complete bush, the flowers ranging in colour from the purest white to the deepest crimson and the most beautiful lilac. Seed may also be sown from March to May out of doors where intended to bloom for a summer and late autumn display.

7	The greatest attention has been, and is still being given to the improvement of the Scarlet Geranium (Zonal,	e and
best no	ay Pelargonium). To the amateur purchasing seed it is of the first importance to make sure wha es are of having really fine flowers. To place him in this position we have had seed collected from the amed kinds, and we have also purchased the stock of seeds from such men as Mr. George, etc., who have b lost advanced types of this useful and now universally cultivated plant. Plants raised from seed sown	y far
in spr	ing are decorative the same season.	
2431	Gera'nium Zona'le, George's, saved from impregnated flowers, the parents being selected for their	
	robust constitution, immense flower-heads, large finely shaped blossoms, rich colours, and profuse blooming. Confidently recommended	5 6
2432	,, Nosegay, George's, a great advance upon anything previously sent out, and like the	5
	Zonale, the seed has been saved from impregnated flowers, the	
	plants having been carefully selected from the finest certificated varieties, etc., so that amateurs sowing this seed will raise plants	
	of great merit, Recommended with confidence, 2s, 6d., 2s, 6d., &	5 6
24\$3	,, Zona'le, Hibberd's magnificent new varieties, the strain being unsurpassed	2 6
2434	,, saved from all the very best varieties, such as Clipper, Dr. Lindley, Excellent, Amy Hogg, Duchess of Sutherland, Lady Constance Grosvenor,	
	Leonard, Ellen Lindsay, Indian Yellow, Orange Nosegay, Beauté	
2435	de Suresnes, Ameline Grisau, Bull's best varieties, etc	1 0
23200	crosses are between the newest dark Zonale varieties, and the	
	best Variegates, such as Lucy Grieve, Sophia Dumaresque, Lady	
	Cullum, Sophia Cussack, Queen of Tricolors, Ealing Rival, etc	5 6
2436	this seed is from crosses between the dark Zonale varieties and Tri-	5
2437	colors, but saved with less care than the preceding	2 6
ZEO!	their finest variegated varieties, Golden Tricolors, Silver Tricolors,	
0.400	Golden Bronzes, etc	5 6

          MATHIO'LA, Nat. Ord. Cruciferæ. Hardy annual night-scented Stocks.
       Mathiola bicornis, the delicious perfume emitted by the flowers of this plant in the afternoon, evening, morning, and after a shower, is truly delightful, and perceptible some distance: it should be scattered about the garden like Mignonette, I ft. ......6d. and tricuspi'data; in our Experimental Grounds during the past summer we were very pleased with the delightful perfume emitted by this plant throughout the duy, I ft.

Per pkt. MICHAUXIA, Nat. Ord. Campanula'cea. Handsome hardy biennial. 2800 Michaux'ia campanuloi'des, white, singular-looking, large bell-shaped flowers, fine border plant, 3ft. o MIGNONETTE (Reseda odorata), Nat. Ord. Resedu'cew. Hardy annuals. Seed of this universal favourite should be scattered profusely in flower and shrubbery borders, also on dry banks, old realls, and any sunny situation, such for instance as the gravel close under the windows. The finest of all for pot-culture is Pyramidalis which is sold under a number of fancy names, such as Pyramidata, Ameliorata, New Crimson-flowered Giant, etc. 2801 Mignonette, very fragrant, ½ ft. large flowered, \(\frac{1}{2}\) ft. \(\frac{15}{2}\), \(\frac{3d}{2}\) and \(\frac{15}{2}\) grandiflo (Ta), the French Giant Tree Mignonette, true, \(\frac{1}{2}\) ft. \(\frac{15}{2}\), \(\frac{6d}{2}\) and \(\frac{15}{2}\) pyramida (1s), the largest-flowered and best for pot culture, \(\frac{1}{2}\) ft. \(\frac{6d}{2}\) and \(\frac{15}{2}\) Parson's New Tree variety, for pot culture, \(\frac{1}{2}\) ft. \(\frac{6d}{2}\) and \(\frac{6d}{2}\) and \(\frac{15}{2}\) mit to Tree variety, for pot culture, \(\frac{1}{2}\) ft. \(\frac{6d}{2}\) and \(\frac{6d}{2}\) and \(\frac{15}{2}\) ft. \(\frac{6d}{2}\) and \(\frac{15}{2}\) mit to Tree variety, for pot culture, \(\frac{1}{2}\) ft. \(\frac{6d}{2}\) and \(\frac{6d}{2}\) and \(\frac{15}{2}\) ft. \(\frac{6d}{2}\) and \(\frac{15}{2}\) ft. \(\frac{6d}{2}\) and \(\frac{15}{2}\) ft. \(\frac{15}{2}\) ft. \(\frac{6d}{2}\) and \(\frac{15}{2}\) ft. \(\frac{15}{2}\) f 6 0 Ι 0 2804 2805 Ó MIMO'SA (Sensitive Plant), Nat. Ord. Legumino'sce. Curious greenhouse annual. MIM'ULUS (Monkey-flower), Nat. Ord. Scrophularia'ceæ. Beautiful perennials. Splendid conservatory and sitting-room plants, with singularly shaped and brilliantly coloured flowers, distinguished by their rich hieroglyph-like markings. They succeed best if the pots are placed in saucers of water. Raised in heat, seedlings flower in a few weeks; in the open ground they are hardy, and flower freely; they also succeed admirably in shady, damp, and marshy situations, or by the sides of lakes. 2808 Mim'ulus du'plex, double-flowering; the calyx of this variety seems to mimic the corolla in its being also beautifully tiger-spotted; a most charming variety, 1 ft. 2809 0 2810 0 .6 2811 2812 drought, I ft. califor'nicus (new) cu'preus, orange crimson, a fine bedder, I ft. 2814 9.9 du'plex, double-flowered, a beautiful hybrid in the style of 2808, 1 ft. 2815 22 2816 2.3 2817 ,, fine mixed, including the older varieties, I ft. 2818 MODIO'LA, Nat. Ord. Malvo'ceæ. Hardy perennial.

For rock-work, baskets, and dry banks, this is a charming plant, foliage elegantly divided. 2819 MUSK-PLANT, Nat. Ord. Scrophularia'ceæ. A favourite hardy perennial. Musk-Plant, yellow, sweet scented, valuable for window boxes, etc., \frac{1}{2} ft.6d. and I o MYOSO'TIS (Forget-me-not), Nat. Ord. Boragina'ceæ. Hardy perennials. Plants for filling beds or for in-door decoration during the spring of 1872, of the Cliveden varieties of Forgetene-not and of Dissitisfora, we can supply in any quantity, prices on application. The name M. Alpestris we omit, as this charming little Forget-me-not can only be had in plants, and the seed which is commonly sold under this name produces quite a different variety. For spring gardening M. sylvatica and M. dissitisfora are by fur the best; Sylvatica where great quantities are planted; Dissitisfora for select beds, and situations where very early effect is a consideration. 6 0 6 0 6 0 0 6 0 6 6 2 oblonga'ta, bright blue, a continental variety, said to be a fine acquisition, \(\frac{3}{4} \) ft....palus'tris, blue, a valuable summer flowering variety for moist situations, \(\frac{1}{2} \) ft....3d. and 2828 2829 MYR'TUS (Myrtle), Nat. Ord. Myrta'ceæ. Half-hardy shrub. NASTUR'TIUM (Tropæ'olum), Nat. Ord. Tropæola'ceæ. Beautiful hardy annuals. Unrivalled for beauty, effect, and utility. In dry soils, or soils made poor with lime-rubbish, they will surpass the Geranium and Calceolaria in brilliancy and in profusion of bloom. To amateurs who have no glass they are a boon, and a valuable supplementary plant in cases of deficiency or failure of "bedding stuff."

2831 Nastur'tium scarlet King of Tom Thumb, intense scarlet, 1 ft., 2832 "golden "", "golden yellow, 1 ft., Thus are the latest improvements, 3d. & o 6 and unquestionably the finest of the 3d. & o 6 and unquestionably the rich scarlet, effective as the Scarlet Geranium, 1 ft. ...1/o per oz., 3d. and 2835 golden, more effective than Yellow Calceolaria, I ft. ... PERIL'LA, Nat. Ord. Labia'ta. Valuable ornamental foliaged half-hardy annuals.

These are most useful plants for back lines and ribbons, or single specimens in mixed borders; the variegated variety plants, when they come true, are almost as effective as the Coleus.

Peril'la Nankinen'sis, deep mulberry foliage, a most useful plant in ribbons, 11 ft. 2967

PETU'NIA, Nat. Ord. Solana'cee. Splendid half-hardy perennials.

Most valuable plants, succeeding almost anywhere, and producing a grand effect in large beds hooped over, and the plants trained on the hoops, also on trellises, against rustic fences, old walls, and on dry banks. Planted on old stumps of trees, vases, rustic baskets or fissures in rock formations, and allowed to droop over, they are matchless. On rock-work and amongst old roots and ruins the effect is beautiful. As a pot plant and for hunging baskets they are valuable, continuing in beauty till very late in the autumn. Sown in March and April they commence slowering in June and July.

```
PRIM'ULA SINEN'SIS, Nat. Ord. Primula'cew. Charming greenhouse perennials.
For winter decoration Primulas are amongst the most important of greenhouse plants, and it is af the first moment that the seed should be from the finest types of flowers. It is well known that several of the growers for Covent Garden Market are noted for their Primulas, the flowers being large, rich in colour, and of great substance, while the habit of the plant is robust and the flowers standing well above the foliage. It is from this style of plant the seed we offer has been saved, and it is unsurpassed. We mention this simply on account of the pretensions put forth by some houses, intended to make believe that they and they only possessed this Covent Garden quality of Primula, "having bought the entire stock," they say.

Per pkt.—s. d. 3087, Primula, Singn's is fined as mixed.
                Prim'ula Sinen'sis fimbria'ta mixed, Barr's select Covent Garden strain, the finest, \( \frac{3}{4} \) ft. ...2/6 and

```
Few plants are more attractive than these when well grown. We shall not soon forget, many years ago, seeing two plants of Retusus in vases at Chiswick, when it was in its halcyon days. Neither shall we readily forget the enjoyment we derived from a single plant of Retusus, which stood the winter of 1869 in our Experimental Grounds, and continued blooming throughout the whole of the Per pkt

              SOLA'NUM, Nat. Ord. Solana'cew. Ornamental fruit and foliage plants.
The following embrace the most picturesque, grotesque, and beautiful of this highly ornamental and elegant genus of plants for sub-tropical effect in summer, and conservatory decoration throughout the year. They are mostly of rapid growth, seedling plants soon becoming effective and ornamental. Pyracanthum is a perfect gem; Marginatum conspicuous for its white foliage; Robustum for its massive brown tinted leaves; Laciniatum and Reclinatum for their exceedingly elegantly divided foliage; Glaucophyllum for its Oleander-like habit and bluishgreen leaves; Warscewiczioides for majesty of form is unquestionably the grandest of the Solanums. In this manner the striping characteristics of sech might be included by described.
the striking characteristics of each might be individually described.

ORNAMENTAL CLIMBERS AND TWINERS.

This is an important section of our Catalogue, and fully merits the prominent position assigned to it, as no glass erection, whether conservatory, greenhouse, or stove, can be considered furnished unless the walls, pillars, etc., are covered with Climbers. In the adornment also of the flower garden, the hardier kinds are invaluable for covering arbours, verandahs, trellises, rustic fences, and forming elegant chains and festoons such as now grace the Royal Horticultural Society's Gardens at South Kensington.

MIXED FLOWER SEEDS

For Shrubberies, Woodland Walks, Railway Embankments, decoration of Wildernesses, etc., 5s. 6d. per pound, or 6d. per ounce.

Many have availed themselves of the above suggestion, and have scattered the Mixed Flower Seeds on large rockeries and rooteries, natural and artificial; in shrubberies, woodland walks, carriage drives, and wildernesses; also, by the side of rivulets, railway embankments, and wherever a floral display was desired beyond the limits of the flower garden.

For a Summer and Autumn Display, sow during March and April, simply scattering the seed broadcast, at the rate of six or seven pounds per acre, and slightly covering it. It must not be sown amongst grass, but patches here and there might be cleared and the seed deposited, rolling or trampling the seed into the soil. For a Spring and early Summer display sow in September and October.

BROWN & CO.'S PATENT B B LAWN MOWERS.

"I have recommended your Patent B B Lawn Mower to many of my friends, believing that the machine does its work better than any other, and combines strength superior to Shanks' machine, with the lightness of Green's.

ALEX. MACKENZIE,

To Messrs. Brown and Co.

Alexandra Park."

To Messrs. Brown and Co.

Prices £3. 5s., £4. 5s., £5. 5s. £6, £7, £7. 10s., and upwards.

B. and S. test the growing quality of the Seeds before sending them out.

BARR & SUGDEN'S COLLECTIONS OF VEGETABLE SEEDS.

Carriage is allowed upon all orders for Vegetable Seeds amounting to 21s. and upwards. See p. 2.

These assortments are made up for the convenience of Amateurs, and consist of selections from the different sections of the Catalogue, suited to gardens of various sizes; they contain the most approved varieties, and such as are best adapted to secure a succession of vegetables from January to December. However, as the wants of families are so varied, it may be more advantageous for purchasers in most cases to order from the body of the Catalogue, using the Order Sheet which accompanies the Catalogue for this year. In the Order Sheet the names are printed consecutively as they appear in the Catalogue, so that it is only necessary to varie in figures the quantity required opposite the name of the article, and from the name to the quantity, to draw a line as represented on this specimen of the "Order Sheet," thus:—

In this way the making out of a general order involves very little trouble, while it greatly facilitates correct and prompt execution.

The Seeds are all of the very best quality, and Cultural Directions are printed on every Packet.

SELECT LIST OF VEGETABLE SEEDS.

ARRANGED AND CLASSIFIED ON AN ENTIRELY NEW PRINCIPLE, AND EMBRACING ALL THE BEST VARIETIES OF VEGETABLES IN CULTIVATION, ESPECIALLY SUCH AS ARE MOST APPROVED OF IN COVENT GARDEN MARKET.

CULTURAL DIRECTIONS ARE PRINTED UPON EVERY PARCEL OF SEED.

All Vegetable Seeds which are priced in the Catalogue at "per packet" send post paid, or allow carriage at settlement, however small the amount of the order: by this arrangement purchasers of small quantities are enabled, without incurring the expense of carriage, to obtain from our Warehouse really superior seeds.

CARRIAGE ALLOWED UPON ALL ORDERS FOR VEGETABLE SEEDS BY WEIGHT OR MEASURE, WHEN THE AMOUNT IS 215. AND UPWARDS.

Section I .- LEGUMINOUS PLANTS, &c.

THE NOTABLE NEW PEAS OF THE SEASON.

Laxton's five latest contributions, and like the Peas which already bear his name, Amongst these are Mr. Laterich is we also combutous, and the free wind ariety bear his name, they show the impress of his indefatigable labours, his ingentity and discrimination in the selection of his subjects for hybridization: also the keen discernment which he has exhibited in culling from amongst many bundred candidates such high typical forms as **William the First**: this, like its German namesake, carried off the laurels of 1871 against all competitors, and that in the able hands of Mr. Gilbert, the gardener at Burghley Park, at the Royal Horticultural Society's great annual gathering. Griffin comes next on the list, early as Sangster's No. 1, of fine flavour, and the ripe seed "green as grass," and will thereby be greatly esteemed to bottle for winter use. Popular stands third on the list, and is to beat the Champion of England. Superlative comes fourth, having the largest and finest pods of any pea yet raised, being twice the size of Laxton's Supreme; and in fact the Goliath of Peas. Omega is the fifth and the last. The name sounds ominously, seeing that Mr. Laxton gave the name "Alpha" to his first really important introduction, and now that he has given us a dwarf Na Plus Ultra it looks as if he thought he had attained to his "grand climacteric" Ne Plus Ultra, it looks as if he thought he had attained to his "grand climacteric.

Mr. Laxton, in sending out these peas in sealed collections, intends them for trial only. Each variety contains from $\frac{1}{4}$ oz., to $\frac{1}{2}$ oz., and the price for the collection of five is One Guinea.

MR. JOHN STANDISH, OF ASCOT,

who has spent a long life in the study of hybridization, and whose successes have been greater than those of most men in leaving his impress on many of our best classes of flowering plants, has now turned his attention to the men in leaving his impress on many of our best classes of nowering plants, has now turned in attention to the Pea, commencing with Ne Plus Ultra and Laxton's Supreme, thereby laying hold of the two most essential qualities in a pea—viz., Constitution and Flavour. Following these up he promises to eliminate varieties possessing the earliness of First Crop, the constitution of Supreme, the productiveness of Hundredfold, and the flavour of Ne Plus Ultra. To this end he has made advances: one of his crosses, having been sown five weeks after Ne Plus Ultra, was ready to gather one week before Ne Plus Ultra, and constituted one of the sixteen dishes which were served up before the tasting party of horticultural friends whom Mr. Standish got together to decide upon the merits of his hybrids.

As Mr. Standish can only devote a very limited portion of time and space to this work, he has placed forty-two of his hybrids in our hands for distribution, feeling sure that those who have time and take an interest in such matters, will not be disappointed in the results. It must, however, be clearly understood that the character of these forty-two Peas is not fixed. They will require selecting, and, therefore, we shall simply send them out under Number, leaving it with the gardener or amateur to perfect the work which Mr. Standish has commenced, and to affix names to such as are worthy of being added to our stock of Standard Peas.

Half the number of varieties 7
Quarter 4 0

PEAS.

The arrangement and descriptive matter, except as regards New Peas, are the results of our personal observations at our own Experimental Sample Grounds, and at the Chiswick Gardens of the Royal Horticultural Society. The comparative merits of these New Peas we trust the Society will fairly test this season, so that we may retain what is good and distinct, discarding what is worthless or no advance on varieties now in cultivation, or it may be simply the discovering of old friends with new names, and such jackdaws as these in the public interest must be divested of their borrowed plumes. The descriptions attached to these New Peas are most voluminous, the names very numerous, with the words, "Perfection," "Unrivalled," "Unsurpassed," etc., used so very profusely that one feels inclined to exclaim—"Too good news!"

We have made a selection from the New Peas of the varieties which appear to us the most advantageous, retaining only the leading points of the descriptions attached to them. All the other sorts not quoted by us can be

supplied if required.		
Division L.—THE EARLIEST ROUND SEEDED PEAS.	per c	46
If sown from November to February, will be ready to gather in May and June.	S.	
First Crop, syn. Ringleader, the earliest variety yet introduced, 2 ft.	I	6
Improved Sangster's No. 1, syn. Sutton's Early Champion, long-podded and productive, 21 ft.	0	
Taber's Early Perfection, syn. Dickson's First and Best, a few days later than "First Crop," 3 ft	I	0
Daniel O'Rourke, syn. Sangster's No. 1, a fine early variety, 2½ ft.	0	8
Beck's Gem, syn. Sutton's Tom Thumb, an excellent pea for early forcing and for small gardens, 1 ft	I	0
Eastes' Kentish Invicta. This variety has fully borne out its character, and is fairly entitled to its posi-		
tion as a fine Blue Pea early as Daniel O'Rourke, and finer flavoured; indeed, it is a		
First Crop Pea, 2½ ft.	2.	0
Blue First Crop, this pea comes to us with a Canadian degree, thus—" Comes into use with White Gem		
(See Division IV.) and of very similar habit, flavour, and foliage, a good bearer, pods		
large, of uniform size," 1\ft.	2	6
American Comet, Carter's Early, Hooper's Rival, Perkin's Improved, etc	1	6
For "First Crop" Wrinkled Marrow Peas, see Division IV.		
DAME OF OTHER DESIGNATION OF THE OTHER DESIGNA		

targe, of uniform size, 13 It.	2	0
American Comet, Carter's Early, Hooper's Rival, Perkin's Improved, etc	1	6
For "First Crop" Wrinkled Marrow Peas, see Division IV.		
Division II.—SECOND EARLY ROUND SEEDED PEAS.		
If sown from January to April, will be ready to gather in June and July.		
Auvergne, syn. Dickson's Favourite, long well-filled pods, a good succession to the above section, 4 ft	0	10
Bishop's New Long-podded Dwarf, a fine branching variety, with long, well-filled pods, 11/2 ft	I	0
Blue Surprise, Carter's, or Fairbeard's, fine flavoured, and a good cropper, 4 ft.		
Champion of Paris, syns. Paradise and Excelsior Marrow, an excellent second early, 4 ft.	I	0
Essex Rival, syn. Ringwood Marrow, a first-rate variety and a heavy cropper, 3½ ft.	- I	0
Hundredfold, an exceedingly heavy cropper, with remarkably well-filled, dark green pods, 4 ft.	2	0

[Barr and Sugden, per qt. PEAS-continued. Laxton's Prolific Long Pod, a heavy cropper, with long, well-filled pods, 4 ft. Supreme, long scimitar-shaped well-filled pods, literally covering the foliage, 4 ft.

Evergreen, described "as of a peculiar dark green when cooked, very productive, and of excellent flavour" C **Princess Royal**, a most productive first-class variety, with long well-filled pods, \mathbf{r}_{2}^{1} ft. **Prizetaker Green Marrow**, a productive variety, with dark green pods, 4 ft. Paradise Marrow, Leicester Defiance, Blue Excelsior, Woodford's Marrow, Blue Prussian, etc. ... 8d. to Division III.—ROUND SEEDED PEAS, SUITABLE FOR MAIN CROP. 'If sown from February to May, will be ready to gather from the middle of July to the middle of August. Flack's Victory, syn. Bedman's Imperial, branching, productive, and of fine flavour, 3 ft. o ro Victoria, syn. Waterloo Tall Marrow, large pods, fine-flavoured, and very productive, 6 ft. I o Waterloo Dwarf Branching Marrow, a productive fine-flavoured late dwarf variety, 1 ft. 2 o In addition to the first-class round seeded Peas enumerated in the three preceding Sections, we can supply all other advertised sorts. Division IV.—THE EARLIEST WRINKLED MARROW PEAS. If sown in March or April, will be ready to gather in June and July. Little Gem (McLean), very dwarf, and a fine full flavour, as early as "First Crop," and a valuable variety for early forcing, for sowing on early borders, and in small gardens. r ft. Advancer, a fine early green marrow, comes in a few days after Daniel O'Rourke, 1½ ft.

Nutting's Multum in Parvo, a variety in the way of Little Gem, with large broad pods, early and productive, 14 ft.

Laxton's Alpha "The First Crop" of the Wrinkled Marrows: one of the earliest, and with a rich marrow flavour; pods long, well-filled, and produced in great abundance; a high-class Pea, 3 ft., per pint, 2s...

White Gem, a Canadian variety, thus described:—"Not more than four days later than 'First Crop,' of excellent flavour, pods large, well-filled, and prolific, 1\frac{1}{2} ft."

SECOND FARLY WRINKLED MARROW PEAS. Division V.—SECOND EARLY WRINKLED MARROW PEAS. If sown in March and April, will be ready to gather in July and August. Best of All (McLean's), a remarkably rich-flavoured and productive sort in the way of "Premier," 3 ft.... 0 Champion of England, an abundant cropper, fine-flavoured, and a first-class variety, 4 ft. Forty-Fold, a first-class fine-flavoured productive variety, with long well-filled pods, 4 ft. Ne Plus Ultra, peas dark green, and of very superior flavour, a first-class prolific variety, 6 ft. Prince of Wales (McLean), a first-class variety, heavy cropper, and fine flavour, 3 ft. Wonderful, an excellent rich-flavoured, free-cropping, productive pea, 3 ft.

Huntingdonian, a very fine variety, in the way of "Champion of England," but a few days earlier, fineflavoured, and a splendid cropper, 4 ft.

Kentish Hero, General Havelock, General Windham, Clarke's Princess of Prussia, Queen of the Division VI.-WRINKLED MARROW PEAS, the best for Main Crop. If sown in April and May, will be ready to gather in August, September, etc. British Queen, a favourite variety of superior flavour, and a fine cropper; during mild seasons, in some localities, it continues blooming and podding till late in autumn, 6 ft.

Blankney Marrow, of Australian origin, described "as very productive, and remaining in condition for table long after other kinds, which are ready to gather at the same time".

Champion of Scotland, syn. Strathmore Hero, a strong growing fine-flavoured variety, in the way of "British Queen," with large well-filled pods, 6 ft.

Figurean, a first-class variety, fine flavoured, and a free hearer a first-class variety, fine flavoured, and a free hearer a first-class variety, fine flavoured, and a free hearer a first-class variety, fine flavoured, and a free hearer a first-class variety fine flavoured, and a free hearer a first-class variety fine flavoured. Epicurean, a first-class variety, fine flavoured, and a free bearer, 3 ft.

Imperial Wonder, a very late exceedingly productive first-class, fine-flavoured variety, with olive-green peas, and broad well-filled pods, 5 ft.

King of the Marrows, syn. Tall Green Mammoth, a strong grower, of branching habit, with long wellfilled pods, which are produced in great abundance; very fine flavour, 6 ft.

Laxton's Conquest, described as "exceedingly productive, with fine rich flavour, the seed being bright green with a white eye"per ½pint 2 Premier, a rich-flavoured, long-podded, productive, high-class, late pea, 3 ft.

The Australian Mossy-podded Latest Crop Pea, a perfectly distinct variety; Mr. Carmichael, the Prince of Wales's gardener, speaks of it thus:—"The Australian Mossy-podded Pea is first-rate, a great bearer; and cooks a beautiful green colour; I will grow it largely for the Royal table." 6 ft.... Knight's Dwarf Green Marrow, Knight's Tall Green Marrow, Yorkshire Hero, Epps' Monarch, Abergavenny Marrow, Carter's Victoria, Hooper's Incomparable Marrow, Wonder of the World, Division VII .- EDIBLE PODDED OR SUGAR PEAS. This variety is much esteemed on the Continent as a very delicate vegetable; the pods are gathered when young, boiled, and served up with white sauce. Tall very large edible podded Sugar Peas, this is the finest of the class, 4 ft. OUR OWN SELECTION. 6 BROAD BEANS.

Mazagan, very early, hardy, and bears freely, 3 ft. 0

Tom Thumb, syns. Royal Dwarf Cluster and Marshall's Prolific Fan, a useful variety, 1 ft. 1

Green, syn. Beck's Gem, a valuable dwarf variety, for small gardens, 1 ft. 1

Johnston's Wonderful Long Pod, fine flavoured and productive, 3 ft. OMackie's Monarch Long Pod, very heavy cropper, fine flavoured, 3 ft. O

Early Long Pod, early and very prolific, 3 ft.

ONION.			
The Fruit Committee of the Royal Horticultural Society awarded us in 1869 a special the largest and finest Collection of Onions ever exhibited before them. A report of these at the	cert	od will	Jor be
The second of Oneons con exhibition before them. It report of these in the	2-16	on well	-

Mixed varieties.....

ONION-continued.

found in the "Gardeners' Chronicle" and the "Journal of Horticulture." In the "Gardeners' Weekly Magnaine," in connection with the report, will be found illustrations of the different types of Onions, from specimens supplied by us, and grown at our Experimental Grounds.

Our Collection of Onions represented the varieties cultivated in this country, and also in Germany, France, Our Collection of Onions represented the varieties cultivated in this country, and also in Germany, France, Holdand, and Portugal (the seed from Portugal being received from the British Consulate at Oporto); our object being to ascertain if the Onion of the grocers was peculiar to Portugal, or had a representative in this country. From a very careful examination we arrived at the conclusion that the Onion of the grocers is fairly represented, both as regards shape, size, and produce, in our brown-skinned varieties of Globe, James Keeping, and Pear-Shaped, a preponderance of the Pear-Shaped being amongst those grown by us from the Oporto seed. We also found that the Madeira varieties of Onion produced with us under ordinary treatment much larger bulbs than the Oporto Onion, thus proving that those fine imported Onions of the grocers are the result of a favourable climate, combined with the special attention which is given to the cultivation of this bulb in Portugal. Mr. Standish of Ascot by means of superior cultivation produced from the Oporto seed as fine Onions any imported.

Trebone this account when the processed of the eventual part of the end of this extraordinary fine.

Trebons, this season we have been successful in securing a small quantity of the seed of this extraordinary fine onion, specimens of which during the summer were twice exhibited at the Royal Horticultural Society's Meetings at South Kensington; for size, symmetry, and delicacy of flavour, they are unsurpassed. per pkt. per oz. As a Winter Onion, it stood uninjured in our Grounds last winter, when most of the Tripolis s. d. s. d.

White Spanish, the mildest in flavour, and most useful for main crop 0 3.0 6 Improved Reading, a large heavy cropping variety of White Spanish 0 4.00 9 Nuneham Park, an exceedingly large fine variety of White Spanish, in sealed packets 1 0.... 6...I 3...0

Giant Madeira Globe, sown in autumn attains an immense size, and is one of the largest of any

Tripoli Flat Italian, mild-flavoured large and handsome, for spring and autumn sowing.

O 4...I O

New White, an exceedingly fine pure silver-white onion for autumn sowing.

O 6...I O New Early White, highly recommended for its quickly attaining a large size o 6... i 6 99

🦝 All the varieties of the Tripoli and Madeira onions attain a large size. For cooking purposes they surpass, in mildness of flavour, the White Spanish onion of the grocers. For general crop they should not be sown, as they are only for summer and autumn use. If sown in spring, they can be used during the autumn months; if sown in autumn, they are in use throughout the summer, so that for six months of the year they might form the

principal onion of the kitchen.

Covent Garden Small Silver Skinned, the best of the small silver-white onions for pickling 0 4...I

Early Nocera, the mildest-flavoured and the best silver-white onion for salad and early use...... 0 6...I Two-bladed, pretty little brown-skinned onion; divested of its outer skins, one of the best for pickling o 4...1

Paris market and Covent Garden with superior lettuce during winter and spring, will find every info	rine	ition o	17
the subject in Robinson's "Parks, Promenades, and Gardens of Paris."			
COS LETTUCE.			
Covent Garden Summer Giant White, a first-class variety, forming large close compact hearts, crisp and fine-flavoured, does not soon run to seed. Our stock this year is more than ordinarily fine, and we have much confidence in recommending it as the finest of all the Summer White Cosp	er pl	ct. per o	z.
Lettuce, 6d. and Covent Garden Summer Giant Green, a first-class variety, large, crisp, and fine-fluvoured, forming close compact hearts, like Giant White Cos, and the best of its kind 6d. and			
Covent Garden Winter Brown, black-seeded, the hardiest and best of the Brown Cos varieties, specially recommended far autumn sowing; it is crisp, rich, and nutty in flavour if tied up for a few days before being cut. In some establishments, where a dry, nutty-flavoured lettuce			
is highly esteemed, this is almost the only one grown the year round Covent Garden Winter Giant White. This exceedingly fine variety possesses all the good qualities of the Summer Giant White, but with the hardiness of the Winter Brown Cos; we confidently	I	02	6
recommend it for autumn sowing, and also for spring sowing	I	02	6
robust, and least-easily affected by heat; when tied up for a few days there is no lettuce equal to it for its crisp, rich, dry, nutry flavour; suitable for summer or winter work	1	63	6
suitable for summer culture on good soils, but as a winter lettuce it excels. It is very hardy, and by far the best of the self-folding Black Seeded Brown Cos; it was awarded a First-class			
Squire's Wiltshire Cos, black-seeded; this is a superior self-folding Brown Cos, attaining a large size; it is crisp, and of good flavour at all seasons, perfectly hardy, and slow in running to seed,			
valuable for summer or winter use	I	02	6
Ivery's Nonsuch Green, syn. Dixon's Essex Champion, a very large distinct Cos lettuce, greatly esteemed by many, and by some considered the finest of all, but not by us		4I	
Moor Park (Prince of Wales), a robust hardy White Cos, suitable either for summer or winter,			
Holme Park, syns. Can't-run-to-Seed and Rowden's Brown Cos, the most distinct of all lettuces, leaves metallic green, the last to go to seed, valuable alike for summer and winter	I	0	
Dimmick's Victoria White Summer, very large, exceedingly crisp, and of good flavour	I	0	
Kingsholme, a large, valuable, crisp, and sweet white summer Cos Scott's Giant White Cos. It would be impossible to speak too highly of this exceedingly fine lettuce; under good cultivation the hearts are very large, crisp, and sweet	1	0	
Vaux' Self-folding Green Cos; described as superior, not soon running to seed	I	02	6
Murray's Champion, a distinct, large, beautifully crisp and sweet variety, recommended especially			
for exhibition purposes	I	0	
Paris White, a very superior fine hearting variety. Paris Green, a good variety for summer, but more valuable for autumn sowing	0	61	6
Bath Cos. black-seeded very fine.	0	A T	0
Bath Cos, white seeded, very fine; this, unlike the black-seeded var., is self-folding	0	4I	0
Florence, or Magnum Bonum, black-seeded, very fine variety	0	41	0

THE POTATO.

The importance of the Potato, as an article of food, cannot be over-estimated, and this has been felt by societies which have had to deal with the produce of the soil. Pre-eminently, the Royal Horticultural Society have given great encouragement in this direction, and their annual exhibitions indicate the amount of mind which has been brought to bear on the subject by cultivators. This year, the varieties shown, notwithstanding the unfavourableness of the season,—for symmetry, for beauty—freedom from any vestige of disease, and in variety, surpassed perhaps any Exhibition of Potatoes ever before brought together.

Neither is it possible to over-estimate the importance of quality in this proceedable, it being a well-leave for

Neither is it possible to over-estimate the importance of quality in this vegetable, it being a well-known fact that the properties of some sorts of Potatoes are much higher than others. It is also a matter of considerable importance that flavour should not be lost sight of, while sorts with deep eyes lead to considerable waste in preparation for table.

Keeping these points in view, we have compiled our list from the varieties which possess the qualities above named in the highest degree, and the adaptability of varieties for different modes of culture. It is well known with Potato growers that variations in soils alter in some degree the properties of Potatoes, and it is also important to find out what varieties are best adapted for any particular soil; this can only be ascertained satisfactorily by the cultivator himself. Another thing to be considered is the variation of our seasons. One year is all in favour of the healthy development of the Potato, while another year favours that fell destroyer-the Potato Disease; and this brings us to an all-important piece of advice which was given to us some years ago by one of

Disease; and this brings us to an all-important piece of advice which was given to us some years ago by one of the most intelligent Potato growers in the Midland Counties.

"Recommend," he said, "your customers, above all things, to grow as great a number of sorts as their space will admit of, and change the seed often. The variety which this season may be diseased, will next season probably be free from it. Therefore," he added, "if you have 20 rows, and in each row a different variety, Nos. 1, 7, 12, and 17 may be diseased this season, while Nos. 3, 8, 15, and 20, may be diseased next season; so long, therefore, as we have to battle with this enemy, we must take such precautions as will give us the minimum of loss."

Our customers will perceive the philosophy of this advice, and we should be very pleased if those who are interested in Potato culture will confirm or refute these statements. They appear to us to be all-important.

With regard to varieties, we have never championed the American Potatoes. We are satisfied that, in this country, we possess varieties far in advance of the Americans; and while we ungrudgingly give credit to the American sorts for their heavy cropping qualities, we cannot bestow upon them that high meed of praise to which, without qualification, the varieties raised by Mr. Fenn of Woodstock, are entitled, and which will, when once stock has been worked up, be our leading Potatoes.

stock has been worked up, be our leading Potatoes

We must not, however, in this eulogy of Mr. Fenn, forget that there are other men in this country doing a great work in impréving our stocks of Potatoes, and with varieties which will be ready to take the place of those which at present are most largely cultivated. Potatoes, like human beings, appear to have their allotted period. They come, they serve their day, and they pass away. They have their youth, their middle age, and their old age, but they are not enduring. The late Mr. Paterson, of Dundee, was wont to say that he was the greatest benefactor of his age, and that his Potatoes were destined to take the place of the Regent and other popular kinds; while he was the greatest they are not enduring. The late were destined to take the place of the Regent and other popular kinds; the proposed to the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and other popular kinds; the place of the Regent and the place of while his again would have to give place to the varieties which such men as Mr. Fenn was originating. He felt that he had given the great impetus to the raising of new Potatoes, and he was wont to assert that the day when this country neglected to follow up his successes would mark a period of decline, for he held that the riches of nations consisted in their power to feed their peoples, and that the Potato was a staple article of food, and indispensable.

There are few vegetables which more enjoy good cultivation than the Potato. If you will trench your ground early in winter as deep as it will admit of, and intermix the manure, and plant in March, you will be amply rewarded for your labour in quality and quantity. The planting, however, may be delayed : we have had large crops from Potatoes planted in May. per peck ROUND POTATOES. of 14 lbs. bush. Early Waterloo, a first-rate variety for frames, the top being very dwarf; the tuber is handsome, s. d. s. d. 6...12 6 freedom from the blighting influences of the potato disease..... 6...12 Dickson's Premier, a handsome first early, excellent flavour, cooks mealy, and a fine variety 0 Covent Garden Prolific, a first-class potato, an extremely heavy cropper, fine flavoured, with a dwarf compact top 0...14 0 Shaw Improved, a very productive early variety

MAIZE.

The following is the substance of a paper read by Dr. Masters at the Royal Horticultural Society's General Meeting on the 7th of December, 1870, in illustration of the remarkable collection of Maise exhibited by the Rev. T. C. Bréhaut, of Guernsey, Her Majesty's Commissioner at the Paris Exhibition of 1867, to report on the present state of Fruit Culture on the Continent. The paper on Maize is given in detail in the "Gardeners' Chronicle," December 10th, 1870.

The collection of Maize exhibited has been formed from various sources, but mainly from a selection from

"The collection of Maize exhibited has been formed from various sources, but mainly from a selection from the splendid varieties shown in the American section at the Paris Exhibition of 1867.

"An experience of three very dissimilar seasons has been gained since 1867. A certain number of varieties has been discarded, either as too small, too coarse, or as ripening too late to make them generally serviceable. It has been sought to popularize the manner of eating Maize (so common in the States of America, and in other regions of the world, including even Southern Europe), as "green corn," i.e., in a semi-ripened condition, when the grains have acquired the consistency and size of good Marrowfat Peas, thus reproducing in the autumn the flavours of the early Pea and of the Asparagus. For this the ordinary yellow Maize is not suited. The collection exhibited claims not only to be the most complete which has probably ever been presented in Europe, but it also shows varieties which greatly excel in size and in flavour the Maize known in this country and in France. also shows varieties which greatly excel in size and in flavour the Maize known in this country and in France, while it still fulfils the special conditions required in earliness. More than this, these ears are grown from seeds acclimated by three varied seasons in the Channel Islands.

"Culture.—The seeds should be sown in common raisin-boxes during April—early in the month in the south, and later in the north of England. These boxes should be placed in a cool vinery, orchard-house, or pit, and the plants hardened off before planting out. This is best done in May, earlier or later according to the season or locality. Last spring, Mr. Dancer, of Chiswick, sowed a quantity of Maize in the open ground in March. It was cut down by the frost, but sprang up from the roots, and yielded a heavy crop, which he showed before the Fruit Committee of the Royal Horticultural Society last autumn.

(When the plants are search for high secure them segment by winds by retent styles, placed at intervalent.)

"When the plants are several feet high, secure them against high winds by stout stakes placed at intervals; with thin cords stretched between them; by this means the rows are easily supported.
"There are certain kinds of Maize better adapted for green fodder than others, being hardy and rapid in increase, and at the same time abounding in saccharine juices, which animals will devour greedily. Even the stalks when hard can be utilized by slicing them, so that there is really no waste."

1, 2, 3, and 4 New Georgian varieties, the whitest and the most delicate for table use; ready in Sep-per pkt.

THE THAMES EMBANKMENT.

IF the present generation of the inhabitants of London had done nothing for posterity save the Thames Embankment, it might well be said of them, in good works they had far excelled the generations of the past. This mighty undertaking is only one of many; it is one which the next generation will enjoy even more than the present, but even to the present it is a "thing of beauty and a joy for ever."

Thousands of our readers may not be privileged to see this wonderful undertaking, and as it will no doubt interesting to many of them who are familiar problem; the light will be interesting to many of them who are familiar problem; the light will be interesting to many of them.

Thousands of our readers may not be privileged to see this wonderfur undertaking, and as it will be interesting to many of them who are familiar only with views of the Embankment as seen from the Thames, we present them with an illustration of what may not inaptly be called the "inner circle" of the Thames Embankment. On each side of the roadway—perhaps the grandest carriage-drive in Europe—are planted rows of occidental planes, which in a few years will form a perfectly shady walk, extending from Westminster Bridge

to Blackfriars. Our illustration gives the ornamental ground extending from Charing Cross Railway Station to Waterloo Bridge, designed by Alexander M'Kenzie, Esq., Landscape Gardener, Alexandra Park, Muswell Hill; executed by Mr. Joseph F. Meston, the well-known horticultural contractor, and clothed with a beautiful green sward, the produce of our mixture of grasses specially made for ornamental parks in large towns. The seed was sown on the 25th August, and within three weeks the ground was covered with a beautiful verdure; and when officially inspected, within three months from the day of sowing, the combination of grasses had formed so close and even a sward, that it was supposed that Mr. Meston had turfed the ground, thus demonstrating that the successful laying down of lawns is dependent upon the suitability of the varieties of grasses used for the purpose, and it is of the first importance to managers of public parks, and to gentlemen interested in such undertakings, to look well to this well to this.

It may be interesting to our readers if we describe the illustration of this part of the ground. Cross Station of the Metropolitan Underground Railway appears on the lower left-hand side of the engraving, and the word "Open" represents the air-shafts of the line. The white portions are the walks, which are asphalted and margined with Irish ivies pegged down in imitation of the beautiful edgings so much admired in the public squares and open spaces of Paris. The circle in the centre represents the fountain, surrounding which are beds cut out of the grass, while a fringe of shrubs surmounts more or less the whole of the ornamental grounds on elevated banks, amongst which are planted deciduous trees to shut out the buildings behind. There is no part of London which is fraught with so much interest as the part we have illustrated. The shaded portion represents where our grass-seed was sown.

Would that Sir Christopher Wren and John Martin could be recalled to life, to witness the realization of their glorious schemes for embanking and beautifying the banks of the Thames, the purified waters sweeping along within their granite boundaries, fringed by noble trees and the banks covered by a verdure as beautiful as the grounds of the Bishop's Palace at Fulham, and that solely by the judicious admixture of the grasses used. What formerly was a dreary expanse of mud is now an enerald set in granite, whither the inhabitants of this great Metropolis, "in populous city pent," eagerly hurry to the banks of the Thames,

> "their very hearts athirst To gaze at Nature in her green array.

BARR'S NEW HEATED FRAMES

FOR RAISING SEEDS, STRIKING CUTTINGS, OR PRESERVING DELICATE PLANTS DURING THE WINTER MONTHS.

It would be impossible to over-estimate the importance and usefulness of these frames to amateurs and ladies fond of gardening, whose glass accommodation is limited. Every amateur knows how difficult it is to raise delicate or hard seeds, and to strike a supply of cuttings for the flower garden, if a suitable hot-house is not possessed. To meet this want, many heated cases have from time to time been introduced, but they were either too complicated or too troublesome. Consequently they were soon discarded.

We have made simplicity the characteristic feature of our case, being manufactured of galvanized iron japanned green, and placed on a stand. It has a water tank, a hot-air chamber, and a lamp, but none of these are observable when the case is at work. The lamp simply requires trimming night and morning, and replenishing with oil; this is done by one of our boys. We use the best Colza oil. To give an idea of the value we put upon these cases ourselves, we test the growth of nearly all our seeds in them, although we have a forcing-house specially for that purpose; but we find the cases do the work far better, especially with such delicate seeds as Primula, Calceolaria, etc., and such hard seeds as Acacia, Canna, etc. We have had these cases in continual operation since their introduction in the spring of 1869, and we have never experienced any unpleasant smell from the lamps, nor have had any difficulty with them. If the wick is properly trimmed, the deposit over the lamp is exceedingly trifling, and from time to time should be removed with a duster. Those who have a greenhouse will find it a good place for the case, where it will answer all the purposes of a forcing-house; and for those who have not, the sitting-room or any spare room will do. Invalids will find it a source of untiring interest if they love gardening.

The Illustration A represents the case best suited for raising seeds and striking cuttings; B is the style of

case, from its greater depth, best adapted for keeping plants in during winter. Seeds may also be raised in it and cuttings struck, but not so successfully as in the more shallow case A. They are manufactured in three sizes. They can be packed to travel to any part of the country safely. We may just mention that the leading gardening papers have spoken most favourably of these cases. Space forbids our quoting their remarks, or the numerous testimonials we hold regarding them. We may add that they have had the approval of some of our best horticulturists, so that in offering these cases we feel we are advancing the science of horticulture.

Negretti and Zambra's Iron Thermometer, adapted for these cases, 3s. 6d.

To Barr's elegant Albert Cases the same heating principle can be applied, and as they are of various sizes, to accommodate large and small window recesses, they constitute an elegant conservatory in the sitting-room.

FRENCH GLADIOLI VARIETIES OF GANDAVENSIS.

The descriptions attached to flowers have frequently formed the subject of humorous criticisms, and not unjustly so, as it often happens, in describing a new garden variety, that the introducer descends to such minutiæ that the general effect of the flower is lost in the multitude of words. Our French friends even surpass us in this respect, the genius of their language and the temperament of the nation leading to very florid and detailed descriptions, which when translated into our more prosaic English—and this being done without the flower having descriptions, which when translated into our more prosaic English—and this being done without the flower having been seen by the translator—results frequently in a jargon of words which only goes to swell out a catalogue, but conveys no accurate impression of the effect of the flower in combinations. In respect to Gladioli this has been peculiarly so, and has tended greatly to puzzle the amateur, and make it difficult for him to select from a class of flowers which in the flower garden produces an exceedingly fine effect; and to cut for the furnishing of vases is invaluable. By a succession of plantings from March to the end of June, a continuous supply of flowers for indoor decoration can be had from the beginning of August till the end of December.

To get rid of the unmeaning descriptions affixed to the Gladioli, we formed a private collection in 1868, so that for four seasons we have devoted special attention to a classification of the colours that strike the eye on first seeing the flower, omitting the detail of markings and distinctions which make up the *tout ensemble* of the flower, and greatly add to its beauty and interest in the flower garden, but in letterpress only confuse the uninitiated. We hope, therefore, that what we have done will be found serviceable to the readers of our Catalogue, so that the amateur, by glancing over our selections, can have the particular shades he is desirous of placing in combinations. This is the first attempt which has yet been made to classify and arrange this flower in colours, and we do not expect it is quite perfect or that it is the form in which we may continue to publish our list of Gladioli, but it is a step in the right direction, and we have no doubt will be very acceptable to many of our readers.

In the first Division we have given the deeper shades of Red; in the second, the softer shades of Red; in the third, the Salmon-shades, blushes, etc.; in the fourth, the Ruby Roses, Purples, Purple Mottles, etc.; in the fifth, the Whites.

For convenience the prices are quoted for one bulb, but when 12 of one sort are taken the price will be 10 to 15 per cent. less. GLADIOLI ROOTS, VARIETIES OF GANDAVENSIS .- Our own Selections.

LILIES—continued.

4154 Auratum, the golden-rayed Lily of Japan. We have in our Experimental Grounds bloomed and described hundreds of this lily. The variations are almost endless: some are profusely and heavily described hundreds of this lily. The variations are almost endless: some are profusely and heavily spotted, others sparingly spotted, and some almost white; some have bronze instead of gold bands, others again produce very large flowers, and others small, medium-sized flowers, etc.; then again some are beautifully formed, and others are deficient in this respect, but all are beautiful and

arrangement, and value in the flower garden; copies on application to those who may not have had our Buth

Catalogue.

TUBEROSES.

These much-prized flowers resemble the Stephanotis, but with the tube of the flower perfectly double. For bouquets, for button-holes, and for ladies' dresses, they are greatly prized for their delicious perfume and their snow-white blossoms. With a little trouble they can be had in bloom from May on to November by successional plantings, and for imparting a sweet odour in the Conservatory or in the half, they are matchless.

TREATMENT.—Bulbs intended for succession should be placed on a dry shelf where the frost cannot reach

TREATMENT.—Bulbs intended for succession should be placed on a dry shelf where the frost cannot reach them. Once a fortnight plant a few singly, in five or six inch pots, plunge in tan or any other gentle bottom heat, and attend to the watering till the flower-buds appear. (Neglecting to water, or not giving sufficient, causes the plants to go blind.) Then remove to the Conservatory, or wherever the flowers are required.

The American Tuberoses have been very greatly extolled by such growers as Mr. Standish, of Ascot, who maintains that finer flowers and a greater quantity are produced from these than from the French or Italian Roots, We have sent to America for a supply of Tuberoses, which we expect to reach England in January or February.

4157 American Double Tuberoses 4157 American Double Tuberoses per dozen, 6s.

BARR'S LONDON-MADE ECONOMIC GARDEN SYRINGE.

For superiority of action, strength, and finish, these high class Garden Syringes are without exception the best in the market. The bore of the barrel is perfectly true, which makes the action of the piston very easy. The packing is finished in a very superior manner, and this secures the full complement of water being drawn into the barrel, while the stuffing-box prevents its escape at the handle, and the correct boring of the rose ensures a perfectly even discharge. Thus, with these Syringes the maximum of work can be accomplished with the minimum of manual labour. All the Syringes can be fitted with the Angle-joint, as shown in No. 1, so that even a lady, in syringing her fern-case or miniature conservatory, can enjoy the full advantages of this mode of washing the plants from beneath, or in any other way where the Angle-joint is necessary.

MANURES FOR FLOWERS, FRUIT, AND VEGETABLES.

BARR & SUGDEN, AGENTS, WHOLESALE AND RETAIL, FOR

STANDEN'S GARDENERS' AND AMATEURS' FRIEND MANURE, inodorous, highly concentrated, and exceedingly rich in the most fertilizing qualities. It is much more efficient than manure-water or guano. It is laid in small quantities on the surface of the pot, and watered in, thus effecting a great saving in labour; and, being perfectly inodorous, it may be applied to plants in conservatories adjoining the drawing-room, or even to plants in a sitting-room. In the garden it is sprinkled on the surface, raked in, and then watered. On grass it soon produces a fine rich green sward. To the Amateur it is a most valuable acquisition, and to the Gardener and Nurseryman, a real friend. Sample canisters, 1s. and 2s. 6d.; large canisters, 5s. 6d., 10s. 6d., and 21s. No. 1 is applied to hard-wooded plants, such as Azaleas, Camellias, Roses, Fruit Trees, Vegetables, etc. No. 2 is for soft-wooded plants, such as Geraniums, etc.

Trees, Vegetables, etc. No. 2 is for soft-wooded plants, such as Geraniums, etc.

BARR & SUGDEN, AGENTS, WHOLESALE AND RETAIL, FOR

McDOUGALL'S PHOSPHAITIC MANURE, prepared by those eminent chemists with great care for plants in conservatories, greenhouses, stoves, flower beds and borders, and for vine and peach-borders, vines in pots, orchard-house plants, and kitchen-garden crops. It induces early maturity, and a free, vigorous growth, producing more richly-coloured and perfectly-formed flowers, larger, better-coloured, and finer flavoured fruits, and superior vegetables, than can be had by using farm-yard manure only, liquid manure, or guano. The Phosphatic Manure possesses the stimulating properties of the finest Peruvian Guano, with a large proportion of soluble phosphates which furnish a supply of food till the crops are matured; it does not leave the soil impoverished, which is frequently the case when stimulating compounds only are used, but it increases the fertility of the soil. Messrs. John Standish & Co., Royal Nurseries, Ascot, have extensively used this manure, and say:—"The Phosphatic Manure seems to suit everything. We put 2 lbs. to a barrow-load of potting soil, and it is wonderful how the plants root into it and flourish." Sample canisters, Is. and 2s. 6d.; 14 lb. bag, 5s. 6d.; 2 cwt. do., 18s.; 1 cwt. do., 35s. We also supply an excellent Phosphate Manure, by the same eminent chemists, for agricultural purposes, and which can be applied to all kinds of green crops, wheat, grass, etc., per 1½ cwt. bag, 25s., or 18s. per cwt. Considerable advantage is given if purchased by the ton. Terms on application.

LAWSON'S PHOSPHO GUANO.—Of this manure Professor Liebies greeks as follows:—"I can say with conviction that

LAWSON'S PHOSPHO GUANO.-Of this manure Professor Liebig speaks as follows:-" I can say with conviction that I never had in hand a better sort of artificial manure, fur superior in its quality, and certainly also in its efficacy, to the best Peruvian Guano." In canisters, 1s. and 2s. 6d. each.

FOWLER'S ECONOMIC GARDEN MANURE.—The effectiveness and permanence of its action is greater than Guano or Farm Yard Manure. In cwt. bags, 21s., in 14 lb. cases, 3s. 6d. The following valuable Garden Manures we also keep in stock, and can recommend. They are pure, and

warranted of the best quality. The Peruvian Guano and Cubic Petre we have out of bond: PERUVIAN GUANO, PERS.—The most stimulating, and, at the same time, the most rapidly available food for Plants generally, and being perfectly soluble, it is the most easily converted into Liquid Manure, 5d. per lb.; or in canisters, with printed directions for use, 1s. and 2s. 6d.

CUBIC PETRE, Pure.—This is used largely as a dressing for Grass and Green Crops, and the effect on these is quickly perceptible. In a liquid state, applied to Fuchsias, Carnations, Chrysanthemums, Celery, etc., the results are most satisfactory, 5d, per lb.; or in canisfers, with printed directions, 1s. and 2s. 6d.

SULPHATE OF AMMONIA, Pure.—An exceedingly useful stimulant, which may advantageously be applied to Grass, Potstoes, etc., and, in a liquid state, to Flowers in beds and borders, and to Chrysanthemums in or out of pots, 5d. per lb.; or in canisters, with printed directions, 1s. and 2s. 6d.

CRUSHED BONES.—This we recommend for Vine Borders, mixing with the soil in planting Fruit Trees, and also mixing with potting soils for such plants as Pelargoniums, etc., 4d. per lb.; or in canisters, with printed directions, 1s. and 2s. 6d.

DISSOLVED BONES.—This is a very superior superphosphate of lime. It is chiefly used for Grass; but, if sprinkled on the surface of the soil of Flower Beds and Borders, its action on the plants is most beneficial, and it also is an effectual preventive against the depredations of snails and slugs, 4d. per lb.; or in canisters, with printed directions, 1s. and 2s. 6d.

BARR & SUGDEN, AGENTS FOR LONDON.
WATSON'S WEED-DESTROYING LAWN-SAND.—A valuable introduction for destroying Daisies, Dandelions, Plantain, and all other tap-rooted weeds on lawns, and at the same time improving the grass. Its value has been thoroughly tested for three seasons, and it can, therefore, with confidence be recommended. Price, in London, 2s. 6d., 5s. 6d., and 10s. 6d. per canister; half cwt. keg, 21s.; one cwt. keg, 40s.

COCOA NUT FIBRE, specially prepared by us with charcoal, for growing Ferns in Plant-Cases, and Bulbs in Jardinets, Glasses, etc. We confidently recommend this article; in it Hyacinths and Early-flowering Bulbs root with great freedom, and throw up finer spikes of bloom than under any other artificial method of culture we have ever adopted. No. 1 quality, 6s. per bushel; 2s. per peck. No. 2 quality, 4s. 6d. per bushel; 1s. 6d. per peck.

COCOA NUT FIBRE, finely sifted, 3s. 6d. per bushel. COCOA NUT FIBRE as received, 2s. 6d. per bushel.

SOILS FOR POTTING, such as PEAT, LEAF-SOIL, VIRGIN LOAM, SILVER SAND, etc., 3s. 6d. per bushel.

BARR & SUGDEN, AGENTS FOR LONDON, WHOLESALE AND RETAIL, FOR

THOMSON'S STYPTIC, a most valuable remedy for preventing the bleeding of Vines after pruning; also used in grafting and budding, and as a preventive to geranium and other cuttings damping off, by simply smearing the end of the cutting, 3s. per bottle, with full printed directions for use.

COMPOSITIONS FOR DESTROYING INSECTS ON PLANTS.

BARR & SUGDEN, AGENTS, WHOLESALE AND RETAIL, FOR
FOWLER'S GARDENERS' INSECTICIDE, the best and safest article for effectually preventing and destroying Plant
Insects, etc., such as Red Spider, Green and Black Flt, Ants, Scale, Thrip, American Blight, Mildew,
Cankee, etc., without injury to Plant or Tree. Sold in jars at 1s. 6d., 3s., 5s. 6d., and 10s., with directions

or use.

"TOBACCO POWDER. In tins, 1s., 1s. 6d., and 5s.

"TOBACCO PAPER, per lb., 1s. 6d.

"TOBACCO PAPER, per bottle, 1s., 2s. 6d., 5s. and 10s.

"WILKIE'S CONDENSED COMPOSITION, for destroying Mealy Bug, Scale. and Thrip. In bottles, 2s., 3s. 6d., and 6s.

"THE APHIS WASH, for destroying Aphis, Red Spider, Blight, etc. In jars, 1s. each.

"THE GISHURST COMPOUND, in boxes; well known and greatly valued as an effectual Insect-killer, and much in demand for dessing fruit-trees in winter, destroying the larvæ of insects, and improving the health of the trees so operated upon, 1s. 3s., and 10s. 6d. each.

"YEY SUPERIOR TOBACCO PAPER, 1s. 6d. per lb.; very superior Tobacco Rag, or Rope, 1s. 9d. per lb.

COLLYER & ROBERTS'S TOBACCO TISSUE, an excellent fumigator, 3s. 6d. per lb. The same perfumed, 4s. per lb.

POOLEY'S TOBACCO POWDER is greatly in demand for destroying Insects and Blight by simply dusting it over the plants; the effect of the powder on ferns and soft-wooded plants is truly marvellous. Canisters, 1s., 2s. 6d., and 5s. each.

"TOBACCO GRAINS, for fumigating. In 1 lb. canvas bags, 1s. 3d.; in casks, 14 lbs. and upwards, 1s. per lb.

"TOBACCO GRAINS, for washing plants. In 1lb. tins, 1s.; in firkins or half-firkins, 9d. per lb.

APHIS BRUSH .- The Amateur wall find this brush invaluable for removing the green fly, etc., from roses, geraniums, fuchsias, and other plants, in or out of doors. The hairs are soft and flexible, so that when the tender shoot is passed between the brushes, it is freed from the insects, and is uninjured by the process. 2s. 6d. each; in a neat case for ladies, 4s. 6d.

BARR & SUGDEN, WHOLESALE AGENTS FOR
THE FRETTINGHAM COMPOUND; this destroys all kinds of insects and mildems that infest plants, whether under glass or out of doors. Per bottle, 1s.; per gal. jar, 5s. 6d.; per half gal. jar 3s; in casks containing 10 or 12 gals., 4s. 6d. per gallon,

BARR'S LONDON-MADE ECONOMIC SUCTION GARDEN ENGINES.

No. 1,-TO BE WORKED BY A MAN OR A LAD.

The mechanism of our No. 1 portable Garden Engine is simple, but of the highest order. It works easily, possessing all the advantages and embracing the latest improvements in Garden Engines. It will throw a continuous stream of water 40 feet, being the greatest distance which has yet been attained by this class of Engine, so that the maximum of work may be obtained with the minimum of labour. The Engine will draw water through a 3-inch suction-hose from a distance of 60 feet, so that with the end of the pipe placed in a well, pond, or stream, a large quantity of water may soon be distributed over the garden, or used for extinguishing fires in dwelling-houses or farmyards. The value of this Engine can hardly be over-estimated for washing fruit-trees,

No. 1.

No. 2.

standard roses, syringing the conservatory, and cleansing windows. On hop-farms it will be of great service for cleansing the hops, or syringing them with tobacco-water. We have added a stuffing-box to prevent the escape of water at the handle, and have placed the waste-pipe on the off-side, so that the operator may work a whole day without wetting himself—a matter of considerable importance. An angle-joint, similar to that used in connection with our Syringe, can be applied for syringing plants from beneath, or in other positions not in a straight line from the operator. The Engine is supplied, at the price quoted, with a $\frac{1}{6}$ -inch two-feet suction hose and strainer, and a discharge-pipe of the same diameter and length, including a jet and two roses. We may remark that the Engine, from its superior fittings and workmanship, does not readily get out of repair, and when it does so it is very easily put into working order again. Price 50s. Extra hose, 1s. 2d. per foot run.

No. 2.—TO BE WORKED BY A LADY OR A BOY.

The construction of this Engine is in all respects the same as No. 1, but with a shorter piston and smaller barrel. It will throw a continuous stream of water 30 feet, and is worked with great ease. To lady gardeners and amateurs it is a boon. Price 425.

Brehaut's Pruning Scissors, largest size, 5/ Orchard-house,, medium size, 4/6 ,, Rose ,, smallest size, 4/

It would hardly be possible to over-estimate the value of Mr. Brehaut's scissors. They are light, and do their work better than any English or French scissors which have yet been introduced'; cutting as clean as a knife, and the curve in the blades prevents the possibility of cutting more than is intended. To the amateur they are invaluable, while to the gardener they are a necessity. They are of various sizes, and we recommend the Rose Scissors to ladies, being the lightest.

THE SELBY FLOWER GATHERER.

It would be impossible to say too much in favour of the Selby Flower Gatherer. In its construction, the spring guide follows the action of the scissors, and thereby infallibly secures hold of what the scissors cut. 5/6 each.

FOR

WINTER, SPRING, AND SUMMER FLOWERING.

SEED BULB&PLANT WAREHOUSE

BARR & SUGDEN,

12, KING STREET, COVENT GARDEN, LONDON, W.C.

"A useful guide for the amateur in the selection of bulbs for the adornment of the conservatory and sitting-room in winter, and the flower garden in spring."

Presented with Barr and Sugden's Compliments.

Immediate proceedings in Chancery will be taken against all infringements of the Copyright of this Work.

SPECIAL NOTICES.

- I, The bulbs quoted by us have been procured from the most experienced and best bulb growers in Holland, and are what they term "selected."
- II. The extensive comparative trials which we annually conduct at our Experimental Grounds have been of the greatest importance in correcting the nomenclature of several classes of hardy bulbs. Of the Narcissi, with the assistance of the Rev. M. J. Berkeley, of the Royal Horticultural Society, and J. G. Baker, Esq., of the Royal Herbarium, Kew, we have cleared up much of the confusion which existed in their nomenclature, and for several months exhibited at each of the Spring meetings of the Royal Horticultural Society, collections of this exquisitely beautiful family. Following Dr. Master's, of the Gardeners' Chronicle, we have cleared up the confusion in the nomenclature of the Early Scillas; and, with the assistance of J. G. Baker, Esq., we have had the late-flowering Scillas correctly named, vide Gardeners' Chronicle of 3rd August, 1872; and with the aid of the same gentleman we have cleared up much of the confusion which existed in the nomenclature of the Lilium family. The results of these experiments will be found in the body of the Catalogue, The classification of the Gladioli into colours we have made considerable advances with, and of other bulbs we have grown large experimental collections, such as Hyacinths, Tulips, Polyanthus Narcissus, Crocus, Iris, etc., with the view of discarding the inferior varieties.
- 111. The Descriptive Index to the Catalogue has been prepared with the view of bringing more immediately under the notice of our customers many valuable species of bulbs and tubers which might otherwise have been overlooked.
- IV. Our Floral Albums (four volumes super-royal) contain above 5000 coloured plates of Bulbous and Tuberous-rooted Plants, Annuals, Perennials, Stove and Greenhouse Plants, Ferns and Ornamental Foliage Plants. These Albums are simply books of reference for the use of those customers who wish to refer to them when in London.
- V. We feel that it would be supererogatory to make the stereotyped statement that we execute our orders promptly and well, as we could not hope by any other means to satisfy our numerous friends, and secure their good-will and recommendation. Owing to the large accession of business, we have considerably enlarged our premises, so as to give increased facilities to the despatch of orders.
- VI. Carriage is allowed on orders amounting to 215, and upwards, to any principal Railway Station in England and Wales, to Edinburgh and Glasgow, and to any principal Station on the North British, Caledonian and Scottish Central Lines. Also to Dublin and Belfast. To Cork and Waterford, by steamboat from London, or as far as Bristol by railway, en route for Ireland. We prefer the latter, being more expeditious, and unless instructed otherwise, we shall forward via Bristol.
- VII. Carriage to be deducted at settlement (in accordance with Par. VI.) Formerly our custom was to pay carriage in London; but we were compelled to relinquish this practice, in consequence of our "Carriage Paid" packages not being delivered with the same promptitude as those not prepaid; and, also, on account of continual complaints from our customers that they also had to pay carriage before they could get the goods. We mention this as the reason why we have abandoned a practice followed by us for so many years.
- VIII. Orders which are paid in advance (in accordance with Par. VI.), will either be sent carriage paid, or a liberal equivalent in goods will be added. The latter course will be adopted unless we are otherwise instructed.
- IX. No charge is made for the packing or the package, except in the case of Plants, Seed Potatoes, Asparagus, Seakale, and Rhubarb. A small charge will be made in these cases for the mat, hamper, etc., and, if returned, half-price will be allowed.
 - X. Fruit and Forest Trees, Soils, Wirework, Plant Cases and Stands, Chapman's "Multum-in-Parvo" Exhibition Cut Flower Cases, Barr's Portable Cut Flower and Bouquet Transmission Cases, Garden Engines and Water Barrows, Flower Boxes, Jardinets, and Terra-Cotta, Rustic, China, and Glass goods—on these we do not allow carriage, and the packages are charged.
- XI. Five per cent. is allowed on all payments made within one month from date of invoice.
- XII. Post Office Orders to be made payable at King-street Post Office, Covent Garden, W.C. All cheques to be crossed, adding the words "and Co." Small amounts may be paid in Postage Stamps.
- XIII. Those with whom we have not previously had business transactions, unless introduced by a customer, are respectfully requested to send with their order a remittance or a London reference.

FOREIGN AND COLONIAL NOTICES.

- XIV. To insure attention, orders must be accompanied with a remittance, a draft, or an "order to pay," on a London agent. The remittance must be sufficient to cover the expense of cases, and also of carriage, as when the freight is not paid in advance a percentage is added to it by the Peninsular and Oriental Company and their agents.
- XV. We pay postage on all "PACKETS" of Flower Seeds sent to India and the Colonies (provided the present restrictions on merchandise at sample post rates be rescinded or not enforced). When sent in Waterproof bags these are charged for.
- XVI. A few pounds weight of Vegetable Seeds can be sent by sample post more cheaply and expeditiously than by Overland Mail, thus avoiding Custom-house intervention and the employment of forwarding agents. In such cases the remittance should leave a margin to cover postage and the cost of Waterproof bags.
- XVII. In shipping plants to India, great care is exercised by us in selecting, preparing, and properly packing the same, and our consignments have, on the whole, been very successful. Still, there are so many contingencies, that we cannot, in any way, hold ourselves responsible for the condition in which the plants reach their destination.
- XVIII. Our successful shipments of seeds to India have led to several of the Agricultural and Horticultural Societies there intrusting us with the execution of orders for distribution amongst their members.

HYACINTHS.

In giving Orders, the Marginal Numbers will be sufficient, but the date of the Catalogue must invariably be specified, as the Numbers are annually changed.

The varieties with a * are single; they have large, compact, handsome flower trusses.

£ s. d.

per doz .- 8.

2

51 50 in 12

Those with a + are double, or semi-double; with flower trusses, usually smaller and less compact than the single varieties, and the individual bells, though larger and more conspicuous, less compactly arranged.

BEDDING HYACINTHS, IN SEPARATE COLOURS.

In the month of April a bed of Hyacinths in the flower garden is one of the most striking objects of floral beauty that can be conceived of. Their massive flowers, and the striking contrasts of beautiful colours are all that can be desired. Those we offer under this heading are specially selected, and consist of varieties best adapted for effect where a distinct mass of one shade is the thing sought, or a systematic classification of colours is aimed at, whether in geometrical lines, ribbons, or beds. For masses in the flower border, and to fill rustic baskets, flower boxes, and vases, they can be strongly recommended. Where cut flowers are largely in demand, these very inexpensive but fine Hyacinths should be cultivated largely, both under glass and out of doors. OUR OWN SELECTIONS.

POMPON, OR MINIATURE HYACINTHS.

The varieties enumerated under this heading produce fine spikes of bloom, and may be grown in small glasses, or small fancy pots; also in masses of from six to eighteen in old china bowls, crystal dishes, jardinets, and such other elegant contrivances as are suitable for the drawing-room. In these, they may be associated with Scilla sibirica, Crocus, Snowdrops, Tulips, Narcissus Bulbocodium, N. nanus, Iris Persica, and other bulbs of dwarf growth; and they will be found to succeed best planted in "our Prepared Cocoa Fibre and Charcoal" (see p. 47), the surface being covered with nice green carpet moss, or Lycopodium denticulatum, and water given

In small flower beds, and young peoples' and children's "very own" gardens, these beautiful varieties of Hyacinths, being exceedingly effective, are admirably adapted, and should be freely planted; also where cut

flowers are in demand, they should be grown largely.

DWARF WHITE ROMAN HYACINTHS FOR EARLY FORCING.

114 Plant these several in a pot early in September, and as soon as they are well rooted commence forcing gently, and give water freely; thus treated they will flower in November. A few successional plantings should be made, so as to maintain a display till the ordinary Hyacinths are in bloom. (The Paper White and Double Roman Narcissus (see p. 13), should be similarly treated, and they will slower at the same time as the Roman Hyacinth.) 21s. per 100; 3s. per dozen.

DWARF BLUE PARISIAN (ROMAN) HYACINTHS.

115 These do not flower quite so early as the White Roman. 18s. per 100; 2s. 6d. per dozen.

NAMED HYACINTHS SPECIALLY SELECTED FOR POT CULTURE, AND FOR FLOWERING IN GLASSES AND IN JARDINETS.

The * indicates the varieties best adapted for forcing and for flowering in glasses, jardinets, and the numerous elegant contrivances in which Hyacinths are grown.

To force the Hyacinth successfully, immediately after potting it is important to place the pots out of doors on a bed of ashes, and to cover them over with the same material to a depth of six inches, allowing them to remain till the pots are full of roots; to secure a succession of bloom, removals from under the ashes should be made once a fortnight after the Hyacinth is ready to force, which is usually six weeks from the time of potting.

If large finely developed trusses and rich colours are desired, forcing must be avoided; the bulbs, after being removed from under the ashes, should be placed on the shelf of a greenhouse, in a sitting-room window, or in a cold frame, close to the glass, and allowed to develope their flowers gradually and naturally.

When the Hyacinth is cultivated in-doors or under glass, water should be given freely to ensure success, as more failures arise from allowing the soil to get dry than from any other cause; the rootlets get destroyed, and the flower in consequence suffers.

The + denotes the double varieties. These, with very few exceptions, are quite unsuitable for growing in glasses, jardinets, or for forcing. Those we offer are, however, the very best of the doubles, and we recommend them for pot culture, but not to be forced.

The "ex" indicates the varieties which produce the finest flowers, and those who cultivate the Hyacinth for exhibition would do well to select from such.

The superiority of single over double Hyacinths may be best estimated by a visit to the Metropolitan and Provincial Hyacinth Exhibitions, where the proportion of single to double flowers shown is about fifty to one.

If any of the under-mentioned "Selections" are chosen, and it is stated that they are for glasses, jardinets, or exhibition, suitable kinds will be sent. If it is stated that the selection is for pot culture, we shall include a proportion of double varieties.

OUR OWN SELECTIONS FROM THE FOLLOWING SPLENDID VARIETIES. These embrace only such as have proved to be most worthy the attention of amateurs

These embrace only such as have proved to be most worthy the attention of amateurs.	_

NARCISSUS, OR DAFFODIL.

The Narcissus is amongst the oldest and most beautiful of Spring flowering bulbous plants. It has for centuries been one of the highly prized Garden favourites, and has commanded in an unusual degree the attention of the scientific botanist. During those epochs when artificial gardening has been in the ascendant. the Narcissus, like many another charming flower, has had to yield to the inexorable goddess of Fashion. At such times it has been saved from extinction by the fostering care of our Botanic Gardens, and of those enthusiastic amateurs who love flowers not for what they cost, but for their intrinsic beauty, and who, while they do not ignore new introductions, discard not their old friends, unless the new is an improvement upon the old. The Narcissus, however, like many other neglected flowers, is now reasserting its position, and claiming its proper place in the general economy of floral decoration.

For well night three months, this season, at each of the fornightly meetings of the Royal Horticultural Society,

we exhibited collections of flowers of the various Narcissi as they came into bloom. Could our readers have seen these, we have no doubt they would have joined in the general exclamations of praise so freely bestowed upon them, and the expressions of surprise that there should be a garden without the Narcissus.

They may be classed among the first and the last of our Spring flowers—commencing with the Trumpet varieties in February and terminating with the Double Poeticus in June.

The nomenclature of the Narcissus, curious to say, appears to have been always in a state of chronic confusion, for we find Parkinson, two centuries and a half ago, complaining that no two catalogues were agreed as to names, adding-"there hath been great confusion among many of our modern writers in not distinguishing the manifold varieties of Daffodils," and with the view of setting the matter right, in his *Paradisi*, published A.D. 1629, he devotes forty pages to woodcuts and letterpress, illustrating and describing the various Narcissi. At that time he had in his garden almost every variety which we at present possess, with other beautiful kinds now evidently lost to cultivation.

Herbert, two centuries later, in his Amaryllidaceæ, enters very fully into the nomenclature of the Narcissus, making free use of his contemporaries, Salisbury, Haworth, and Ellacombe, who were all deeply versed in the different forms and varieties of the Narcissus; and from authors such as Parkinson, Miller, Linnæus, Sweet, Clusius, etc., and from the various Herbariums, he drew largely in dealing with this fine family of bulbous plants. In 1869, J. G. Baker, Esq., of the Royal Herbarium, at Kew, modified the classifications of the various writers on the Narcissus, and his classification, as cultivators, we have found most useful in our arrangement,

NARCISSUS-continued.

and in assisting us to correct the confusion which exists in the nomenclature. For the benefit of our readers we have adopted Mr. Baker's arrangement in our Catalogue, and our great regret is that we cannot offer all the different Narcissi described by the eminent authorities we have named; for assuredly our ancestors possessed varieties of great beauty which are not now to be had. We have, however, done what we could, in making our collection as complete as possible, and have made several important additions.

N.B.—Should any of our Readers be possessed of scarce varieties of Narcissi, we shall be happy to exchange with them or become purchasers. To this end we invite them to send cut flowers enclosed in a small box by post.

CULTURE, ADAPTATION, AND USE.—The Narcissus succeeds in almost any situation and soil, but undoubtedly the right place for it is a position not too much exposed to the mid-day sun, as the expanded flowers sustain less injury by severe frost, by the withering March wind, or the coldest rain, than by a few days of hot dry sunshine. They should therefore be planted on the margins of copess or amongst the grass, in ornamental plantations, woodland walks, carriage drives, and shrubberies. The roots multiply year by year; therefore they should be occasionally lifted, the ground enriched, and the roots replanted. This will increase the supply of cut flowers, as the Narcissus is one of the most valuable in Spring for furnishing vases, table bouquets, etc., lasting a long time in water, while in beauty of flower and variety of form it vies with the best of our indoor plants, and the Incomparable or Peerless section compares favourably with the Camellia and the Rose.

GROUP I.- Magni-coronata, crown as long or rather longer than the divisions of the perianth.

The varieties under this heading consist of Haworth's Ajax (the Trumpet Narcissus), and his Corbularia (the Hoop-Petticoat Narcissus). The variety No. 344 is what Parkinson calls Pseudo-Narcissus aureus Anglicus maximus, or Mr. Wilmer's Great Double Daffodil; and which Parkinson says he and "Mr. Wilmer of Stratford Bowe, Esquire," received from Vincent Sion of Flanders, "an industrious and worthy lover of fair flowers." In the Garden, vol. i., p. 455, D. T. F., in describing two Daffodil Gardens composed of this variety, speaks of the effect as "waving seas of Daffodils," "surpassing apples of gold in baskets of silver," "flowers and leaves springing forth from amid the tender grass," etc. No. 336, Parkinson calls the Prince of Daffodils and the Glory of Daffodils, and names it Pseudo-Narcissus aureus maximus flore pleno, sive roseus Tradescanti. There are several other double forms described by Parkinson. One of these he tells us is natural to our country, "for Mr. Gerrard found it in a poor woman's garden in the West of England," and after that he heard that it was found wild in the Isle of Wight. This is doubtless the double form of the Pseudo-Narcissus of our woods, but which of the double varieties we have is this, we have not yet been able to determine. The beautiful Double White Trumpet Narcissus, illustrated by Sweet, we have secured a supply of bulbs this season, and of the White Bulbocodium (Corbularia Clusii) we can offer fine healthy roots; we have a goodly stock of the scarce species N. Minor of Linnaeus, and of the beautiful early flowering, N. Telamonius we have a fine stock, which we believe is exclusively in our hands. In the succession of flowering, Maximus with its large beautiful golden yellow trumpet-shaped flowers succeeds Telamonius. This again is succeeded by Emperor and Empress, conspicuous for their immense Golden Trumpets and Silver Shields. But in speaking of these sons of Anak of the Magnicoronatæ section, we must not forget the little Minimus, which expands its flowers while yet fr

GROUP II.—Medii-coronate, crown half as long as the divisions, or in one or two exceptional cases three quarters as long.

The first in this galaxy of beauty is Incomparabilis, which Parkinson calls Narcissus latifolius omnium maximus amplo calice flavo, sive Nompareille, the Great Nonsuch Daffodil, and which Haworth calls Queltia. There are several varieties of this. The white one Parkinson calls the Peerless Daffodil; it has two double forms—one white, with a rich orange nectary, which is sometimes called Butter and Eggs; and the other white, with a sulphur nectary. If the planting of these two last is delayed till the beginning of January, they bloom in May, with flowers as large and as perfect as that Queen of flowers the Rose. Next in importance is the Philogyne of Haworth, or what Parkinson calls the Lady Mattenesse, or Lesser Nonpareil Daffodil; it is exceedingly graceful, and to cut for vases or table bouquets is most valuable. The double variety (the first time we have been able to offer it), is a plant of rare beauty. Macleai is a miniature Bicolor. Triandrus, Juncifolius, and Montanus, are very distinct and very beautiful, and will be most highly prized by those who are fond of rarittes.

The Philogynes differ from each other very slightly, except in the case of Odorus; the flower of this is larger and more spreading, while Trilobus is smaller, and the divisions of the perianth more closely arranged.

GROUP III.—Parvi-coronata, crown less than half as long as the divisions of the perianth.

In this section is the true Narcissus. Parkinson called it the Purple-ringed Daffodil: it is now called N. Poeticus, of which there are several varieties. Angustifolius, or Stellatus, flowers in March; Recurvus, Majalis, etc., flower in May; and the double form, with its snow-white blossoms, continues blooming till well nigh the middle of June. Many of our readers may remember the grand effect produced in the borders of old kitchen gardens where these were wont to be grown in long unbroken bands, a sight not readily to be forgotten; the snow-white flowers of the double peering from amidst the graceful green foliage on the one hand, and the purple ring contrasting with the pure white of the single varieties on the other. Biflorus, the two-flowered species, is a The Tazetta, or Bunch-flowered species, offered in this Group, are remarkably beautiful, being more dwarf,

and generally with smaller heads of bloom than the varieties of Tazetta we offer under the head of Polyanthus

Narcissus.

GROUP III .- continued, POLYANTHUS NARCISSUS.

The Polyanthus, or Tazetta Narcissus, in beds or masses in the flower garden, produces a grand effect, and forms a striking contrast to the Tulip and the Hyacinth. The varieties offered are perfectly distinct, so that they may be grouped together for effect, or in separate masses. Where large quantities of cut flowers are in demand plant these flowers freely, in or out of doors, and they will not fail to give the utmost satisfaction. the open ground the crown of the bulb should be from six to seven inches under the surface.

POLYANTHUS NARCISSUS. FOR POT CULTURE.

The rich golden-yellow and the snow-white large heads of bloom, indicate the Polyanthus Narcissus as indispensable where showers are cultivated for winter and spring decoration, as in pots, glasses, and jardinets; and while the culture is as simple as for the Hyacinth, the results are in all respects equally satisfactory, and, like the Hyacinth, when three bulbs are grown together in a 6 or 7-inch pot, the effect is greatly enhanced.

Where stowers are in demand in December and early in January, the Paper White and Double Roman Narcissus are invaluable. Pot them early in the autumn, and when well rooted commence forcing as required Thus treated, they and the Roman Hyacinth can be had in bloom from early in November.

GROUP III.—continued. JONQUIL NARCISSUS.

The double and the single Jonquil are greatly prized for their fragrance, and are cultivated three or more in a five-inch pot, and treated as recommended for the Hyacinth. Campernelli is one of the most effective plants in the flower garden, and very pretty when cultivated in pots.

	per doz.— #	. d		per doz.—s. d.

THE TULIP.

Tulips in Spring are amongst the most beautiful and effective objects in the Flower Garden. Their colours are rich and charmingly diversified; they are extremely hardy, of the easiest possible culture, and they are always a success. They will grow in almost any soil and situation, flowering with the same freedom in the shade as in the sunshine, and as much at home in confined town gardens as in more favoured situations. In front of shrubs, bands of double and single intermixed maintain a display for a long period, surpassing that of almost any other Spring flower, while in beds of distinct colours, or the colours intermingled, they are always objects of admiration; and in gardens of limited extent, and where the flower beds must be kept gay from the first opening of Spring, the surface of the Tulip beds may be planted with Forget-me-Not, Silene, Collusia bicolor, etc., and so arranged, the floral display is maintained till the Summer bedding plants are ready to furnish the beds.

We have omitted from our Collection several which we consider superseded, and replaced them by others of greater merit, being the result of the extensive trials continually going on at our Experimental Grounds.

EARLY SINGLE TULIPS.

No other section of the Tulip displays so great a variety of delicate, striking, and attractive colours as these. Of selfs there are beautiful scarlets, crimsons, whites, and yellows. Of parti-colours, there are snow-white grounds, striped and feathered with purple, violet, crimson, rose, puce, and cerise; and yellow grounds, with crimson, scarlet, and red flakes and feathers; so that only those who have cultivated the varieties of Early Single Tulips systematically can form any just idea of their beauty, when grown three in a pot, or massed in beds or in groups in the flower borders. There is nothing about these flowers gaudy or objectionable to the most refined taste; the form, the colours, and the combinations are graceful and pleasing in the extreme.

EARLY SINGLE TULIPS FOR OUT-DOOR CULTURE OR FOR POTS.

IN BEDS, GROUPS, RIBBONS, RUSTIC BASKETS, VASES, FLOWER BOXES, ETC., THESE ARE SPLENDID.

EARLY SINGLE TULIPS, NEWER VARIETIES.

The following include the newer kinds, and show considerable advances, especially in the shape, colour, and increased size of the flowers—points of considerable importance in flowers cultivated in-doors. Amateurs desirous of having a named collection of Early Tulips, or who may have some select bed where they would like to have as great a variety and as much beauty as possible combined, would do well to purchase one or more of each of the two collections. One bulb each from Nos. 431 to 530, 30s.

EARLY DOUBLE TULIPS.

The leading features in these are their massive forms, brilliant, diversified, and beautiful colours, which admirably adapt them for beds on the lawn, terrace, or flower garden, and for edgings to Rhododendrons, Azaleas, and Roses; also for planting in the flower and shrubbery borders in groups of three or more.

The * indicates the varieties which may be grown in pots; and, amongst these, Tournesol, 561, which flowers with the Early Single Tulip is invaluable for forming sectional lines when the Early Tulips are planted in

TULIPS-continued.

designs. For forcing, the Tournesol is the most valuable, and forms in the early Spring months one of the leading features in flowering plants brought into Covent Garden Market. Imperator Rubrorum is the best scarlet, and Tournesol Yellow is the best yellow, for pot culture. Most of the others are very effective in pots, but it is not desirable to force them, except very gently. In pots, the Tulip requires the same cultural treatment as the Hyacinth. Yellow Rose with Gold-striped Foliage is a valuable acquisition. In beds, Rex Rubrorum is the most effective scarlet, and La Candeur the most effective white. Indeed, these two Tulips stand unrivalled amongst Spring flowering plants.

We think it only right to state that our mixed double Tulips do not contain any of those nondescript colours which too frequently form part of the double Tulips sold in mixture;

LATE-FLOWERING SINGLE TULIPS.

These Tulips were formerly greatly prized by Amateurs for their individual seauty. Now that effect is the main thing sought after in the flower garden, they are valued for the grand display they produce in close succession to the Early Single Tulips, thus forming a connecting link in the general Spring display.

PARROT TULIPS.

The flowers of the Parrot Tulips are large, and before expanding resemble a parrot's beak; the colours are brilliant, forming singular combinations rarely met with in flowers. In mixed borders and in front of shrubs they are strikingly effective. Grown in hanging baskets they droop over the side and impart quite an orchidaceous effect.

GESNERIANA TULIP, OR TULIPA SINENSIS HORTENSIS.

This is the showiest of all Tulips; the flowers are large, and of the richest intense scarlet. It is taller than the ordinary Tulip, and forms a succession to the early-flowering varieties. It should, therefore, be planted in isolated beds, in lines or ribbons, in front of shrubs, or in groups in the borders. The rich dazzling colour and the size of the flowers make it an invaluable subject for distant effect.

CROCUS.

The Crocus is one of Flora's first heralds of Spring, and for the flower garden it is indispensable. When used two or three lines deep as an edging to beds, or to form broad marginal lines in distinct colours, or in various colours blended, the effect is remarkably striking. We have seen long, broad, wavy bands of golden yellow, of pure white, and of deep purple Crocus, also fancy devices of these, and groups and masses of 10 to 1,000 bulbs, expand with such effect in the sun, as to elicit the greatest admiration. In lawns and pleasure parks where the grass is not mown very early, the Crocus and Snowdrop planted in scrolls or other fancy designs are frequently introduced with remarkably fine effect; while in wildernesses and woodland walks they are universal favourites as associates of the sweet-scented violet, the primrose, and the oxlip.

The depredations of mice on the Crocus may be prevented by placing pieces of the Crown Imperial bulb near

where the roots are planted.

CHEAP DUTCH CROCUS.

These are offered by the thousand at moderate prices that they may be planted extensively as edgings to beds, in shrubbery borders, woodland walks, wild gardens, lawns, pleasure parks, etc. To one customer we last Autumn supplied nearly 50,000 Yellow Crocus to edge off beds cut in the grass, and such was the grand effect produced, that he informed us it was his intention, as opportunity occurred, to edge off the whole of his beds in a similar manner. The beauty of such masses, expanding beneath the mid-day sun in February or March, is such that the brush of the artist would fail to convey the effect.

CHOICE NAMED DUTCH CROCUS.

The following splendid large-flowered varieties, with their rich, beautiful, varied, and distinct colours are admirably adapted for edgings to select beds, and for carrying out specific and fancy designs. Purples can be had in various hues, whites as pure as the snowflake, and yellows as bright as burnished gold; while in variegates Sir Walter Scott stands out prominently with its grand flowers almost as large as Tulips. These named varieties Sir Walter Scott stands out prominently with its grand flowers almost as large as Tulips. are the best Crocus for pot culture, and when used for this purpose, they should be planted thickly together, grown in an airy situation, and have abundance of water.

BULBOCODIUM, OR SPRING MEADOW SAFFRON.

This is one of the first heralds of spring; like its autumn flowering relative, the Colchicum, the flowers appear suddenly as if by magic, leaving the more material part of the plant, the leaves, to follow. This distinctive character greatly enhances its value, as may be readily imagined when unexpectedly you come upon a mass of rich rose-purple flowers without a vestige of foliage. For permanent edgings, rockwork, and mixed borders, it is exceedingly attractive.

650 Vernum, rose-purple, per 100, 10s. 6d.; per doz., 1s. 6d. fol. variegatis, rose-purple, foliage margined white, very attractive, per doz., 4s. 6d.

SNOWDROP.

It is indeed seldom a whole bed is given up to the Snowdrop, and yet, if there is one pleasure greater than another to the lover of Spring flowers, it is the sheet of snowy blossom which is seen in a mass of these. They must be planted for this purpose without stint, the bulbs almost touching each other; and to secure a succession of bloom from the same bed, Tulips, Hyacinths, or Narcissus may be planted at a depth of six inches, and the Snowdrops on the top of these at a depth of three inches. As the Snowdrops pass out of bloom, the second crop will just be making their way through the soil, and the foliage of the Snowdrop will act as a green carpet to the second display. A similar effect may be produced with Crocus, and with that loveliest of all early Spring flowering plants, Scilla Sibirica. A bed of surpassing beauty can be formed with a deep edging of Scilla Sibirica, and the centre of Snowdrops.

It is in permanent situations, however, that the Snowdrop is most usually planted, and for which it is best adapted, planted thickly in lines three to six bulbs deep, or in masses where they can remain undisturbed, such as close to the edges of flower beds and shrubbery borders. In grass lawns and pleasure parks they should be planted in scrolls or fancy devices, without disturbing the turf, simply by making holes five inches deep with a dibber, dropping in two inches of fresh soil, then three bulbs, and filling up with soil, keeping the holes about three inches apart.

18. d. 8. d. 0.4 21 0 654 Double-flowering, extra large roots 30 0 ... 3 6 .

WINTER ACONITE.

The golden blossoms of the Winter Aconite contrast richly with the pure white of the Snowdrop and the lovely blue of the Scilla Sibirica. These, combined with the rich green carpet of leaves which continues for months, indicate it as a valuable plant to cultivate in situations where it is desirable to clothe the ground, such as under trees, where few things else will grow, and in moist situations where few plants will stand the winter.

657 Winter Aconite, golden yellow, per doz., 6d.; per 100, 2s. 6d. to 3s. 6d.; per 1000, 21s. to 3os.

IRIS.

The Iris is a flower of extreme beauty. Its form is quaint; its colours rich, beautiful, diverse, and forming combinations only to be met with in the rare Orchids of the Hothouse, the beauties of which can only be enjoyed by the very few, while the Iris, being perfectly hardy and of easy culture, may be enjoyed by all. A judicious selection will impart to the flower borders during the spring and early summer months quite an orchidaceous effect. We have seen in March the exquisite *Reticulata*, its fragrant intense purple-blue flowers fully expanded and remaining uninjured with two inches of snow on the ground and the thermometer several degrees below freezing-point. Next in succession is *Persica*, with its violet-seented flowers and rich combinations of colours. Then comes the rare and beautiful *Iberica*, with a combination of pure satiny-white, rich purple-brown and black. Then the dwarf *Crimcan* (Pumila*), so admirable for permanent edgings. Close upon these, *Nudicaulis*, with its violet flowers; and then *Germanica*, with its endless variations of colour, from the richest golden yellow, ranging to rose and to the intensest purple. Continuing the chain of success is *Sibirica*, with its beautiful small orchid-like flowers; and *Kæmpferi*, with its splendid shades. Then towards July come the *Spanish*, with their flowers of snow-white, porcelain-blue, and clear yellow; and with combinations again, which are only to be compared with those of the rare and curious Orchids. The last in the list are the *English* varieties in July, with flowers so sumptuous representing almost every shade of colour, distinct and in comvarieties in July, with flowers so sumptuous representing almost every shade of colour, distinct and in combinations, that these can only be compared with the Lælias and the Cattleyas, the Queens of the Orchids. We have not spoken of the beautiful Peacock Iris, nor of the wonderful Iris Susiana, nor of the Variegated Iris which is so beautiful in vases and so effective in the flower garden, nor of the charming little Iris Cristata. For pot culture, Reticulata, Persica, and Pavonia are gems. To cut for filling vases and for jouquets, all the Iris are charming.

ENGLISH IRIS, IN COLOURS FOR BEDDING OR MASSING. MASSING These are bulbous Iris. They are sent out dry, and should be planted in light well-drained soils. Where the soil is heavy, the roots should be surrounded with sand. The varieties enumerated are distinct and strikingly effective, and are recommended to be planted in groups or in beds.

We have repeatedly exhibited flowers of these at the Meetings of the Royal Horticultural Society, and they

have elicited the greatest admiration, contrasting favourably with the Lælias and the Cattleyas then exhibited.

flowers of golden yellow, clear porcelain, rose, and purple of intensest hue, are unsurpassed; the parti-coloured varieties are of almost every shade, and the combinations of colours exquisite. They grow freely in any soil and situation, thriving in town gardens, in shrubbery borders, woodland walks, wild gardens, and the sides of lakes; while in mixed flower borders the contrast is exceedingly effective. To cut for filling vases, they are matchless, and their individual flowers, in the arrangement of table baskets or epergnes, are unique. The varieties offered are from the magnificent collection cultivated in our Experimental Grounds.

VARIOUS IRIS.

The Peacock Iris, or Pavonia, is a charming little plant, cultivated in pots or in warm situations and light soils out of doors. The Persian Iris (Persica) flowers almost as soon as it can free itself from its winter covering; grown several in a pot it is equally prized for its delightful violet perfume and for its rich and beautiful markings. Reticulata is a rare gem in the greenhouse, and equally at home out of doors, where it is often seen in bloom when the snow is on the ground. Susiana is an indescribable beauty, massive in form, and curious in colour. Fol. variegatis is prized for its beautiful green and white variegated leaves, effective in vases, in flower borders, and as an edging. The amethystine flowers of Cristata are best set off on rockwork. Nudicaulis is an introduction of Mr. IRIS-continued,

Robinson, and considered by him the finest of the tuberous-rooted Iris. Sibirica, with its pretty little orchidaceous flowers surmounting its grassy foliage; Victorine, with its large, white, and blotched purple flowers; Queen of the May, with its lovely, soft, light mauve blossoms, is as remarkable as it is beautiful. And so we might dilate upon the other species.

IXIAS, SPARAXIS, TRITONIAS, AND BABIANAS.

GROWN UNDER GLASS THESE FLOWER IN MARCH AND APRIL, OUT OF DOORS IN MAY, JUNE, AND JULY.

These are amongst the most graceful, attractive, and beautiful of Cape flowering bulbs. They differ considerably in style and habit of growth, but, being closely allied, they require the same cultural treatment.

For In-Doors.—Plant from September to December five or six bulbs in a five-inch pot, using a compost of turfy loam, peat, or leaf-mould, mixed with clean sand. Make the soil firm about the bulbs, then place them in a cold pit or frame, plunging the pot in ashes, and withhold water till the plants appear, then give sparingly at first. The lights should not be kept on except during very wet or frosty weather. Early in March, when the plants have made some growth, they may be removed to the greenhouse, or where there is a very gentle warmth, and placed on a shelf close to the glass till in bloom.

FOR OUT-DOORS.—Choose, if possible, a light loamy soil, thoroughly drained, and with a due south aspect; if backed by a wall or greenhouse all the better. Plant the bulbs from September to February, at a depth of from four to six inches, and one to three inches apart. The early plantings must be the full depth, and the later plantings need not be covered quite so heavily. As the roots should be kept as dry as possible during winter, the early plantings must be protected either with litter, or with two or three inches of dry leaves; or the beds hooped over and protected with mats. The January or February plantings seldom require protection.

At our Experimental Grounds we have grand displays of these charming flowers, year after year, sometimes by making up a temporary pit, and placing in it about a foot of good soil, and in this plant the bulbs, about two inches deep, and during wet and frosty weather protect simply with shutters. The masses of bloom in May we have had from these were surprising, and we could not help feeling at how trifling an amount of trouble so large a quantity of valuable flowers to cut for in-door decoration could be produced. In January last, we planted in beds in the open ground our surplus stock of roots, and for two months we have had a succession of lovely flowers. IXIAS. Tho

The colours of these are rich, diversified, and striking, forming contrasts of the most remarkable character, not only in the different varieties, but also in the individual flowers. The habit of the plant is most graceful; and when a quantity of them are in full bloom, and the sun's rays falling upon them, they present a picture of gorgeous beauty, such as may have been dreamt of in the fabled gardens of the Hesperides.

The following descriptions have been made when the slowers were open: when closed, most of the yellows and the whites have the outside of the petals red or purple. Thus, when the sun is not on the slowers there is one effect, but the most brilliant display is when the slowers are fully expanded.

Mr. Saunders, of Guernsey, writing some years ago with reference to the Sparaxis, remarked that enthusiastic florists unaccustomed to see these in bloom scarcely knew which to admire most. So great, indeed, was their ecstatic delight at the immense variety of the colours and the gorgeousness of the bues, that he had seen the knee bent and gymnastics performed without feeling at liberty to condemn the performers. The Sparaxis is dwarf and compact in growth, imparting a very pretty effect in decoration, and in colour and formation of flower totally distinct from the Ixia. For pot culture they are charming.

TRITONIAS.

These in habit and growth very much resemble the Sparaxis, being dyarf and compact; but the colours are less varied in character, being principally selfs. Their beauty is of the highest order, and as associates with the Sparaxis in all matters of decoration, they cannot be too highly recommended. T. crocata is the best known amongst these through Mr. Fleming, at Cliveden, having grown them by thousands, from six to a dozen in a pot, for furnishing jardinets during the spring and early summer months.

Here we have plants in habit and growth similar to the Sparaxis and Tritonia, but as diverse in colour from these as it is possible, and with dark green hirsute foliage; so that, apart from their intrinsic and distinctive beauty, as a contrast they cannot be too strongly recommended to associate with these in all the different styles of in-door decoration for which such plants are annually becoming more extensively used.

THE RANUNCULUS.

· A truly elegant and beautiful flower, combining with the most diversified shades and colours an exquisite symmetry and compactness. As a cut flower it is quite as useful as the Rose; while for bedding, ribboning, massing, and edging, in separate or distinct colours, the effect produced in spring is magnificent.

RANUNCULUS—continued-

CULTURE. -For successional blooming, plant the Turban varieties from October to January, and the Persian from January to March. The Ranunculus succeeds best in a somewhat moist soil, but any soil, properly prepared, will grow it to perfection. Plant on a dry day, when the soil works kindly; draw drills two inches deep and five or six inches apart, sprinkling a little sand at the bottom of the drill. The tubers should be firmly pressed into the soil, with the claws downwards, and covered with sand, then with soil, keeping the crown two inches under the surface. During severe weather, cover the bed with dry litter, leaves, or old tan; but the covering must be removed before the plants appear. In April and May, should the weather be dry, water the beds freely two or three times a week, and when the flower-buds appear water daily, if necessary, and continue doing so while the plants are blooming; but be careful to wet the foliage as little as possible.

The cost of Ranunculus roots, except in the case of choice varieties, is so trifling, that it is not much sacrifice, immediately they have done blooming, to dig up the beds, and put in the summer and autumn blooming plants,

and thus no time is lost in the succession of flowers.

THE ANEMONE.

Amongst the diversified forms of floral beauty which enrich the flower garden, from the first opening blossoms of Spring to the last rose of Summer, the Anemone occupies a prominent place, possessing many points of interest and special characteristics of colour. Its blossoms are of the most dazzling hues of scarlet, purple, and blue, self-coloured and striped. The foliage is elegantly serrated, and the growth is neat and compact, so that in beds, groups, ribbons, or as an edging to Tulip or Hyacinth beds, arranged either in distinct colours or mixed, they produce a unique effect.

The flowers of the Double Anemone are extremely handsome; they have outer guard petals, resembling a

semi-double Hollyhock. If planted from October to December, they will bloom in succession during the early

Spring months, while those planted in February or March will bloom from April to June.

The Single Anemone, with its beautiful poppy-like blossoms, may be had in bloom throughout the Spring and early Summer months; and, in sheltered nooks and mild seasons, even in December and January.

CULTURE.—The Anemone delights in a light rich loamy soil, but generally succeeds in any soil which is well drained. Sea-sand, or a little salt mixed with the soil, is a good preventive of mildew; in other respects, the culture and after management should be precisely the same as that of the Ranunculus.

Unal Isllian latur

Barr and Sugden, 1872.]

gr-all cyclamen.

Charming winter and spring blooming tuberous-rooted plants, many of them as remarkable for the beautiful variegation of their foliage as for their flowers, which are the personification of neatness, chasteness, beauty, and grace. In a finger-glass, a lady's bouquet, or a gentleman's button-hole, no flower elicits so much marked attention and admiration as the Cyclamen. Their culture is very simple; all the varieties will succeed in a sittingroom window, a cool greenhouse or conservatory, placed close to the glass. The varieties of Atkinsi, Coum, Græcum, Hederæfolium, Repandum, Vernum, and Europæum, are perfectly hardy as regards cold; but should have a little shelter against the cutting winds of Spring and the hot sunshine of Summer. When planted in the open border, a suitable position should be chosen. The soil should be removed, and rubble to the depth of a foot to eighteen inches should be put in, and on this a nice compost of a few inches of vegetable soil, loam, and sand. The bulbs planted and left to themselves will grow freely, and established masses will give an abundance of flowers. On rockwork and in rooteries, the hardy Cyclamen are quite at home. Grown in pots, the simplest to howers. On toekwork and in roboteless, the hardy cyclames are quite a home. Grown in pots, the simplest protection that can be afforded by a frame will be ample, taking care that the drainage is well attended to, as they are most impatient of moisture at the roots. When in growth they should have plenty of moisture overhead; indeed all Cyclamens cultivated in pots, under glass, when growing freely, should be syringed at least twice a day. After reporting, the pots should be placed in a house or frame with a due north aspect, and when removed to their blooming situation, they should be placed, if possible, with a southern aspect.

Cyclamen Europæum we import extensively from the Alps, and annually large quantities of this delightfully fragrant variety bloom in our Experimental Grounds; and as they grow freely in the flower border, we strongly recommend their extensive culture on rockwork, the bottom of old walls, in wild gardens, etc. The price is 25.

per 100.

Persicum and its varieties are not hardy, but succeed in a very low temperature, such as may be afforded by

a cool greenhouse or drawing-room, and they will thrive also in a stove or an orchid-house.

All the varieties of Cyclamen are sent out in their blooming-pots, with the exception of the Europæum, which are offered at a cheap rate. These we have growing in the open ground.

Mixed varieties of Persicum consist principally of the large-flowering kinds, such as annually carry off the first prizes at the great Spring Flower Shows at the Royal Horticultural Gardens and the Royal Botanic Gardens; many of them being fragrant.

CYCLAMEN-continued.

970 Seed from Wiggin's, Welch's, and Edmond's Prize Varieties of C. Persicum grandiflorum, 2s. 6d., 3s. 6d., and 5s. 6d. per packet. When properly handled, seedlings flower within 12 months after sowing.

SCILLA.

Scilla Sibirica is the brightest and most beautiful of our early Spring flowers, blooming with the Snowdrop and the Crocus, its intense rich blue contrasting finely with the pure white of the one and the many hues of the other, and continuing long in bloom. Where it shows to greatest advantage is in permanent edgings and groups,

other, and continuing long in bloom. Where it shows to greatest advantage is in permanent edgings and groups, there becoming dense carpets of flowers so thick as almost to hide the foliage. For pot culture and for jardinets, alone or associated with other bulbs, it is invaluable. Scilla bifolia is next in importance, preceding Sibirica in its time of flowering, but not quite so lasting. Scilla amœna succeeds Sibirica in time of blooming; but S. sibirica is the gem of the early flowering Scillas. Scillas amœna succeeds Sibirica in time of blooming; but Following these come the late Spring Scillas, Nutans and Cernuus, and the Spanish Scillas, which are Patula and Campanulata, flowering in April and continuing throughout May. These Wood Hyacinths delight to exhibit their beauties in somewhat shady situations, such as Rhododendron beds, shrubbery borders, woodland walks, and positions where they can remain undisturbed; and where the soil is at all good, established plants will yield flowers of size and beauty which their near relation Hyacinthus orientalis, the Dutch Hyacinth, in all its grandeur only excels in degree. Scilla pernyiana flowers in Summer, throwing up immense heads of bloom. its grandeur only excels in degree. Scilla peruviana flowers in Summer, throwing up immense heads of bloom, and established plants are exceedingly effective. In August, S. japonica and autumnalis are in flower, and masses of these in the borders make one feel as if they were at the Alpha, instead of approaching the Omega, of the season of flowers.

All the varieties of the Scilla should be used in Rockwork, and they are all valuable as cut flowers.

For many years we have been cultivators of hardy Scillas, collecting them wherever they could be purchased, and we have now perhaps the finest collection of these in Europe. The confusion in the nomenclature we found to be great; but, thanks to Dr. Masters, who cleared up the confusion amongst the early-flowering Scillas, and to J. G. Baker, Esq., for his able paper in the Gardeners' Chronicle of 3rd August, 1872, on the late Spring-flowering Scillas flowering Scillas.

Following these eminent authorities we have arranged, as under, the Scillas we have been cultivating.

M. botryoides, the Grape Hyacinth, is remarkable for its dwarf growth and neat compact heads of bloom; the dark blue, clear bright light blue, and pure white varieties, contrast strikingly with each other planted in lines, circles, or in beds, ribbons, groups, etc. M. racemosum, the Starch Hyacinth, flowers at the same time as M. botryoides, the spikes of bloom in the two species very much resemble each other; but in racemosum the individual flowers and spikes are somewhat larger and more numerous, foliage more ample, and, on the whole, bed or group, the richer effect is in favour of racemosum. M. racemosum pallens (new) is less dense in colour, a trifle dwarfer, and forms a fine contrast to the darker species, M. racemosum; both M. botryoides and varieties, and M. racemosum and varieties are charming, cultivated in pots. M. moschatum, the Musk Hyacinth, is ineffective, but the flowers are delightfully fragrant, so we recommend them being cultivated in pots. M. plumosum monstrosum, the Feathered Hyacinth, flowers latest in this section; its remarkably handsome plume-like appearance entitles it to a prominent place in every border. Cultivated in somewhat shady situations, the Muscari

AMARYLLIS.

THE FAR-FAMED BELLADONNA AND GUERNSEY LILIES.

wild gardens...per 1000, 50/; per 100, 6/.

The flowers of the beautiful Guernsey Lily are brilliant scarlet, and in the sun's rays appear as if spangled a gold-dust. The Belladonna Lily is white, flushed with rose-purple, and very handsome.

These bulbs are generally received from Guernsey early in September, and always showing the flower bud. Orders for them should, therefore, be given immediately after the 1st and not later than the 15th September. When dispatching these to our customers, we examine the flower-bud of each, discarding such as at the time do not give promise of a good flower. Notwithstanding this precaution on our part, delay in transit, not planting immediately they are received, or, it may be, an undeveloped defect in the flower-scape, for which we cannot be responsible, may lead to partial failure. We therefore recommend those who wish to ensure the enjoyment of these charming flowers, as they are so exceedingly cheap, to purchase an extra quantity, and thus avoid disappointment and annoyance.

CULTURE.—Immediately the bulbs with the partially developed flower scapes are received, plant them in light soil, prepared cocoa-fibre or moss, and give water liberally. Bulbs supplied after their flowering period should be potted and treated same as recommended for Vallota purpurea.

continue long in bloom, and established masses or lines are very effective.

1067 Belladonna Lily (Amaryllis Belladonna) per doz.
1068 Guernsey Lily (Nerine Sarniensis) ,,

The varieties of Amaryllis in this section are very easily cultivated; when grown in pots, the protection of the most ordinary frame is ample. The varieties of Belladonna are truly charming: their rich coloured blossoms strikingly effective in the greenhouse in autumn; while they and the Longifolia, if planted in a dry south border under a wall, or in front of a greenhouse, and left undisturbed when established, will annually produce their large showy and beautiful umbels of funnel-shaped flowers. Atamasco, Candida, and Lutea are neat plants of dwarf growth, and with beautiful Crocus-like blossoms, which expand in autumn, and are exceedingly effective, whether planted several in a pot, or grown in groups in a well-drained border, or in select parts of rockwork. Atamasco—the Atamascan Lily—flowers first, next Candida, which is called "The Flower of the West Wind," and then Lutea, "The Lily of the Field," with its rich golden blossoms. Formosissima, the Jacobean Lily, with its beautiful rich curiously-shaped flowers, cannot be too strongly recommended for forcing, or for conservatory decoration in summer. Vallota purpurea, or the Scarboro' Lily, is an invaluable autumn-flowering plant of the simplest culture and the highest order of beauty; those who have no other convenience than a sitting-room window can grow it with success, while those who have a greenhouse or a frame should cultivate it in quantity, using it for filling vases, furnishing their greenhouse, or to cut for table bouquets, flower baskets, etc. using it for filling vases, furnishing their greenhouse, or to cut for table bouquets, flower baskets, etc.

CHOICE GREENHOUSE AMARYLLIS.

In large establishments the Amaryllis is an indispensable requisite. It is a plant ready for all emergencies: it may be put on the dinner-table, used for furnishing vases and jardiness, or to cut for table bouquets, etc. Few plants are more easy of culture, and whoever possesses a warm greenhouse should not be without a supply of the respitate in the easy of varieties in this section.

1085 Choice unbloomed Seedling Amaryllis, hybrids of the most magnificent varieties in cultivation, which cannot fail to produce flowers of great beauty. 42s. per doz.; 4s. each.

LILIUM.

Lilium Speciosum Imperiale (as Siebold designated the Auratum, the Golden-rayed Lilies) has been instrumental in popularizing one of the richest, most interesting, and beautiful families of hardy summer-flowering bulbous plants, so that a great impetus has been given to botanical collectors to ransack what are known as the habitats of the Lily in Europe, America, India, and, as far as the native laws permit, what are known as the habitats of the Lily in Europe, America, India, and, as far as the native laws permit, in Japan, which up to the present time has contributed more beautiful species than any other part of the world. The Rocky Mountains, California, and Columbia, have recently given us Humboldti, Washingtonianum, Californicum, Columbianum, etc. Herr Leichtlin in Germany, and G. F. Wilson, Esq., at home, have for years past been devoting themselves to collecting all the known species and varieties of the Lilium; while J. G. Baker, Esq., of the Royal Herbarium, Kew, has classified and botanically described the whole family; and in following his arrangement in classifying the Lilies we offer, we trust that purchasers will find it as useful in making their selections as we have in our Europirocal Council for the control of the proceedings the proceed

selections as we have, in our Experimental Grounds, found it in correcting the nomenclature.

To those who can leave their Geranium beds, and pass to a modified form of the mixed flower borders of former days, we would suggest that masses of Lilies be interspersed along the borders, say three in a spot, where they may remain undisturbed for years, and so arranged as to maintain a succession of flowers from the middle of May to the end of September. The Pyrenaicum and Pomponium come first with their bright yellow and rich red Turk's-cap blossoms, and while these are still in beauty, Bulbiferum, and the varieties of Daywigum unfold their first public of east held should be signed flowers which cartings till lake. Then Davuricum unfold their fine unibels of erect, bell-shaped, rich-coloured flowers, which continue till July. Then Croceum, with its bright yellow, black-spotted blossoms, and the varieties of Thunbergianum, ranging from the softest apricot to the richest crimson, maintain the succession. While these are yet in bloom, the Candidum expanding its snow-white flowers, and the noble Excelsum its apricot blossoms, and the grand Giganteum, towering aloft with its coronet of flowers, join in filling the atmosphere with a delicate perfume. Ere these have passed away, the purple and white Martagon, and the intense scarlet Chalcedonicum, have lent beauty and variety; the goldbanded Auratum has commenced to unfold its splendid blossoms, and Longiflorum spreads its carpet of snow-white flowers on banks of green. The old favourite Tiger Lily, with its grand spikes of rich scarlet flowers, contrasts strikingly with the Auratum; and while still in their grandeur, Speciosum, the most beautiful of all, expands its pure white and light or deep rose-coloured blossoms, which seem all rugged with rubies and garnets, and sparkling with crystal points. Well might the introducer of this species say, "If there is anything not human which is magnificent in beauty, it is Lilium Speciosum." These continue the galaxy of beauty to the end of September. In August the Speciosum is received into the gay circle of Lilies by the old Tiger, and is chaperoned by the magnificent L. Fortunei, and waited upon in September by the noble T. Splendens; while Superbum, majestic and distinct, raises its grand spikes of flowers conspicuously from amidst the Rhododendrons.

FOR CONSERVATORY DECORATION, all the Lilies enumerated are suitable (except Pyrenaicum and Pomponium). The roots should be potted, placed out of doors on ashes, and the pots covered over with the same material to the depth of about six inches, and should there remain till the plants have speared through the ashes, when they may be removed to a cold frame, with a north or a south aspect, according as they are wished for late or early blooming; or they may be placed in the sitting-room window, or greenhouse, and we are of opinion they may even be gently forced for early flowering, provided the pots are well filled with roots, and water is given

ISOLIRION GROUP.

The Lilies belonging to this Group have the flowers erect and bell-shaped. They embrace the section of Red Lilies, which represent the European, American, and Japanese forms of the typical Bulbiferum. Those of European origin are Bulbiferum proper, and the sub-species, Croceum and Davuricum. Those of America are Catesbæi and Philadelphicum; and the Japanese are Concolor and Thunbergianum. They are all perfectly hardy, Catesbæi and Philadelphicum; and the Japanese are Concolor and Thunbergianum. succeeding in almost any soil or situation, with the exception of Catesbæi, a native of the warmer states of North

	ARCHELIRION GROUP			

This is a grand Section, as its name implies,—the Chief of Lilies: the flowers are open and reflexed, horizontal or slightly drooping. The introducer of Speciosum remarked, "If there is anything not human which is magnificent in beauty, it is Lilium Speciosum." Auratum has been called the Queen of Lilies; and we think that Tigrinum may fairly be called the Prince of Lilies, courtly in its bearing, rich and chaste in its coloration. It may, indeed, be questioned if there is in Flora's Kingdom another such trio combining so much beauty, stateliness, and variety. They are natives of Japan, in flower from July to the end of September, and under glass may be had in bloom much earlier. under glass may be had in bloom much earlier.

The relative quality of each variety is indicated by "Ex."

1176 Auratum, most of the varieties have gold bands and crimson spots: there are some, however, with scarlet spots, and others with the gold band somewhat bronzed; while others have few and delicate spots, and some are almost white; indeed, the variation is almost endless. Seldom are two varieties alike. 3 ft.

The GLADIOLUS.

The grand Value is of Rayons.

Frequency has it been our rivilege to revel amongst the rare beating of the righting of the Gladiolus, and we have been our rivilege to revel amongst the rare beating of the righting of the Gladiolus, and we have been characteristic with them also of flowing and deep dution, and to cut for furnishing vases jardinets, e.g. of to lift when showing their flower scape and pot or conservatory decoration. Prominently amongst them down a right besones their flower scape and pot or conservatory decoration. Prominently amongst them down to be showed the right of the right with its pure white feathers; Elfrida, with its large must be sooned the pulpie, Rosea maculata, with its lively rose; and Prive Albert, with its day ose flowers; Ramosus (the species), with its salmon-rose flowers. And so we could pick out every tint that is dearned in the day of the right o

rich rose-purple of Byzantinus is matchless.

CULTURE. -On well-drained soil trench the ground as deeply as it will admit of; in the underspit work in abundance of manure; commence planting the bulbs in November, and for succession in December and January, at a depth of six inches. Until March protect with a covering of leaves or litter. Plant again in February and March, placing the bulbs three to four inches deep. If the summer is dry and the weather hot, twice a week at least give the ground a good soaking of water or liquid manure till the plants are in bloom. In wet situations the

¥192

bulbs should not be planted till spring.

CULTURE FOR CONSERVATORY DECORATION.—Plant three in a five or six-inch pot, and place in a cold frame or pit, plunging the pots in ashes, and withholding water till the bulbs have started into growth; or, the pots may be buried in ashes out of doors, as recommended for the Hyacinth, and there allowed to remain undisturbed till ready to remove in-doors. It is customary with many to plant several bulbs close together in the open border, and, when the flower-spike shows the first tint, to lift them without breaking the ball, pot them and place them in-doors. Thus treated, the flowers expand as perfectly as if they had not been disturbed, and the bulbs are in no way injured.

MISCELLANEOUS BULBS AND TUBERS.

THERE are no doubt many persons who peruse our Catalogue whose practical knowledge of flowering bulbs is limited to Hyacinths, Tulips, Crocuses, Narcissi, Gladioli, Lilies, and perhaps a few others more or less popular. In addition to these, however, there is a vast number of other bulbous and tuberous-rooted plants (the following being merely a selection), of which nothing can exceed the brilliancy, the beauty, and the variety of their flowers, or the elegance and effectiveness of their foliage, and one or other of which at nearly every season of the year is an

object of attraction. Their culture cannot by any means be considered difficult, most of the hardier varieties requiring a light porous soil, lying well to the sun, and slightly protected during winter; while those which require in-door treatment should be grown in well-drained pots, in a mixture of leaf-soil, loam, peat, and silver

Those who can make it convenient to call at our warehouse, can, through the medium of our Illustrated Album of Bulbous Roots, make themselves acquainted with these interesting forms of floral beauty; while for those living at a distance we shall be happy to make a selection of the roots suitable to the accommodation they may possess, at the prices enumerated, including only the bulbs and roots in this section of our Catalogue. few of these are now ready to send out, but a large number of them being still in growth, it will be November before general orders for the following can be executed.

The selections for in-doors will consist of stove and greenhouse varieties; those for out-doors, in addition to sorts which are perfectly hardy, will include such as require to be kept in-doors during winter, and planted out in spring. The height is given in feet.

I Indicates perfectly hardy plants.

northy to a spant Bout requiring rivile source protection actors leave fruiter. Coming stove plants roots which should be kept at rest during winter and started into growth in spring. each, -s. d. ALOCASIA—continued. ABOBRA, an elegant climber for conservametallica, with leaves like bronze metal tory, hanging baskets, or out-doors, with shields; A. macrorhiza variegata, with its prettily-cut small glossy dark green foliage.

1299 viridiflora, miniature scarlet fruit large green and pure white foliage; A. Jenningsi, with its rich velvety green leaves **ACHIMENES**, charming for growing in pots, pans, and hanging baskets, either in assorted or individual colours. The flowers and regular black blotches; and the beautiful Lowi. 1322 Jenningsi, each 5s. 6d., 7s. 6d., and 10s. 6d. 1323 Lowi, each 5s. 6d., 7s. 6d., and upwards. combine great individual beauty with richness and brilliancy. 1324 macrorhiza variegata, each 3s. 6d., 5s. 6d., and upwards. 1325 metallica, 5s. 6d., 7s. 6d., and upwards. *ALSTREMERIA, most beautiful, flowering in 1302 I each of 12 4 large umbels, and valuable for table bouquets. Should be planted under a south wall in well-drained soil, at a depth of 9 1303 mixed varieties, 3s. 6d. per doz. 1304 newer varieties, three roots in a pot, 18s., 24s., 3os., and 3os. per doz.

\$ACORUS. The variety offered is handsome, its long dark green Iris-like leaves freely inches, and there allowed to remain. 1326 aurea, yellow, beautifully spotted .. striped and margined white. 1327 brasiliensis . 1327 brasiliensis

LIST OF PLANTS USED BY MR. FLEMING AT CLIVEDEN.

READY TO SEND OUT ANY TIME AFTER THE IST OCTOBER.

The phrase, Spring Flower Garden, is "familiar to our ears as household words," and to realize its charms requires none of the paraphernalia so necessarily adjunct to the Summer Flower Garden. All the plants and bulbs required for producing an effect in Spring—far surpassing in variety of tint, diversity of form, and brilliancy of colour, the subjects used in the summer garden—are perfectly hardy, so that as soon as the cold weather sets in and the exotics have been removed in-doors, the beds and borders require simply to be forked up and manured, and furnished as taste or fancy may suggest. Bulbs, such as Hyacinths, Narcissus, Tulips, Crocus, Snowdrops, Winter Aconites, Triteleias, Ranunculus, Anemones, Crown Imperials and Scillas, all have their places. Besides these there is a perfect galaxy of beauty to be realized from combinations of the following flawering plants—Alvssum, Arabis, Aubrietia, Cliveden double daisies—pink, red, and white; Cliveden blue and white Forget-Me-Nots, and the charming Myosotis dissitifiora which blooms in February and continues till May;

the Cliveden Pansies—blue, purple, yellow, white, and porcelain; Polyanthus, Phlox subulata and Subulata alba, with their sheet of rose and pure white flowers resting on their mossy carpet of green foliage, the double white Pink, and Pearce's blush Pink; Primroses and the Viola Cornuta Perfection, and Imperial Blue Perfection; also the white Viola Cornuta can be highly recommended, and Viola lutea and major; the single Wallflower and the double German Wallflower for back rows or for beds. Of annuals there are many of beauty the most striking; and, when sown in autumn, the effect realized after the plants have stood the winter can only be fairly estimated by those who have cultivated them for maintaining and perpetuating the succession of a spring display. A Spring Garden means flowers, weather permitting, from Christmas to June, and any one possessing a garden need have no difficulty in having all this with the plants named. Of annuals we may mention a few: Agrostemma, Calandrinia speciosa, red and white; Candytuft, Clarkia, Collinsia, Godetia tenella, Lasthenia, Hymenoxis, Leptosiphon, Linaria, Lupinus nanus, Nemophila, Oxyura, Platystemon, Saponaria, Silene pendula and pseudo-atocion, Viscaria, Whitlavia, etc. Sow in September as early as possible out of doors, or later on in the season in cold frames, and plant out in spring. Amongst ornamental foliage plants for the Spring Garden we may mention the Golden Feather Pyrethrum, with foliage in spring as bright in colour as Californian gold; Ajuga, with its mulberry leaves, Arabis albida fol. variegatis, with its white variegation, Veronica incana, with its neat silvery foliage, Aubrietia variegata with its white variegation, Cerastium tomentosum with its silvery grey foliage, the golden blotched Daisy, the Stachys lanata with its large white foliage; and then, as edgings for permanent work, Euonymus radicans argenteo-variegatus, and the gold-margined Thyme,—
Thymus citriodorus aureus marginatus.

Fifty charged at the rate per 100, a less quantity at the rate per dozen; any quantity under half-a-dozen will be charged a little higher than by the dozen.

CLIVEDEN COLLECTIONS OF SPRING FLOWERING PLANTS.

. SUB-ALPINE MOUNDS.

One of the latest and most interesting features which have been developed in gardening is the Sub-Alpine aspect, wherever such can be introduced. Mounds are thrown up and planted with an Alpine vegetation, and, where possible receding, giving various heights and depressions, such as are to be found in natural landscapes—a kind of semi-wild Alpine garden where every tint of Alpine foliage and every variety of Alpine flower may be associated as in nature, while up the pseudo-mountain-side some of our pigmy firs can be planted; and, in the summer-time, as in nature, while up the pseudo-mountain-side some of our pigmy firs can be planted; and, in the summer-time, Echeveria metallica, arborea, and arborea purpured, and other such massive-leaved plants, and the whole of the intervening spaces covered with hardy Alpines which remain uniqued during our severest winters. As the verdure graduates, so the distant peaks may be capped with the silvery-foliaged Antennaria tomentosa, which, during the summer and winter months, at a distance, looks as if the summits were covered with snow. The more Antennaria is exposed the whiter and more beautiful it is. Those who may not have seen works of art in this way would do well to visit Battersea Park, undoubtedly the finest public ornamental garden in Europe. There, has been cradled, nurtured, and developed the finest features of our leaf-gardens.

SELECTIONS OF HARDY PLANTS FOR SUB-ALPINE MOUNDS.

						8.	d.							d.
1671	200 in 200	species	********	120/, 140	, and	160	0	1675	50 in 25	species	25/	30/, 21	nd 35	0
											12/6			
	100 in 50										6			
	50 in 50			30						,,		, 31,		
				5-1		-								

1678 Antennaria tomentosa (the Snow Plant), 100/ per 1000; 15/ per 100; 3/6 per dozen. In pots, 6/ per dozen. This is one of the indispensable plants in all classes of Alpine work.

1679 Sempervivum montanum (the Mountain house-leek), 7/6, 10/6, and 15/ per 100; 2/6 and 3/6 per dozen.

1680 "Californicum (the Californian house-leek), 10/6, 13/, 21/, and 25/ per 100; 3/6, 4/6, and

6/ per dozen.

1681 tictorum (the English house-leek), 10/, 15/, and 20/ per 100; 2/6 and 3/6 per dozen. 1682 Lithospermum prostratum, the most intense blue flower in cultivation, 50/ per 100; 9/ per dozen.

We have quoted the above plants in quantity at a cheap rate; they should be used largely in all Alpine work. As edgings to beds, Sempervivum californicum and montanum are matchless for neatness and beauty. Tictorum, if the brood is removed, becomes a plant of massive and beautiful proportions; we have seen it nine inches in diameter. Lithospermum is matchless in its intensity of colour, and Antennaria for its silver foliage.

WINDOW GARDENS.

The progress of Horticulture as exhibited in Window Gardening is very pleasing. Turn where you will, in town or in country, there is a healthy rivalry in the maintaining of a floral display at the parlour, dining-room, or drawing-room window, and this is not surprising as there is in the tending of plants a softening and refining influence which no other pursuit seems capable of imparting to the mind. But Horticulture is one of those subjects whose length and breadth is the universe. Every country of the world pours in annually its offering. Men with their lives in their hands scale the most dizzy heights to secure additions to our choice Alpine gens; and they traverse the virgin forest with only the trail of the native savage for their guide, and risk their health in the malarnous districts of Africa, and their lives in the wilds of North America, and for what? Not for gold, verily, but for the pleasure which is derived by ardent minds in collecting and bringing from their obscurity those lovely flowers that hitherto were—

"born to bloom unseen

And waste their sweetness in the desert air."

These Window Gardens embrace so wide a range of subject that an ordinary bay window such as is represented in our woodcuts can be made to accommodate 200 or more species. Each in its season is a source of interest, and developes its own peculiar beauty; so that a window arranged as our illustration represents will afford daily pleasure throughout the entire year. There is the Autumn tint, the Winter green, the freshness and variety of Spring, with the flowers of Summer. Thus, in this horticultural microcosm is exhibited the "great dial of the year," wherever.

"The seasons pass and strike the quarters."

The illustration of our new Window Garden represents Alpine plants, such as the Achillea, Ajuga, Alyssum, Androsace, Antennaria, Arabis, Arenaria, Armeria, Artemisia, Arum, Aster, Aubrietia, Bellium, Calystegia, Campanula, Cerastium, Cheiranthus, Dianthus, Draba, Erinus, Gypsophila, Hepatica, Iberis, Iris, Linaria, Lysimachia, Myosotis, Opuntia, Oxalis, dwarf Phlox, Saponaria, Saxifraga, Sedum, Sempervivum, Echeveria, Silene, Statice, Thalictrum, Thymus, Veronica, Vinca, etc. While to these can be added of bulbous plants, Sternbergia lutea, with its large yellow Crocus-like flowers; Zephyranthes candida, with its silvery white blossoms, and for spring blooming the intense biue Scilla Sibirica, the Spring Snowflake, the Snowdrop, the Crocus, the miniature Hyacinth, the Narcissus Bulbocodium and Nanus, the Bulbocodium vernum, the dwarf early single Tulips, and many other bulbous plants will contribute their charms. Here within a limited space is a garden with representatives from every temperate clime. The invalid who can only be moved in a chair can tend this garden, while those who are much confined in-doors have only to turn their eyes to the window to enjoy the refreshing influence of their Window Garden. To children it is a rare treat. The aspect is homely, the subjects are chaste, many of them peculiar in form, and in diversity matchless; so that to all, whether young, middle-aged, or old, these congregations of plants have a charm which is known only to those who have made such collections. In their culture there is an absence of all difficulty, the great bugbear to the uninitiated, the question of soils, of situations, of aspects, and the thousand and one things to be attended to, which are a stumbling-block to some, and an excuse to others, for not being surrounded with the most humanizing and elevating of all material pleasures. The Window Gardens, planted as they appear in our illustration simply require to be kept free from weeds and attended to with water. This done there is no limit to their duratio

THE NEW WINDOW GARDEN.

The construction is of the simplest possible character, so that any one can make such a structure, or have it made by an ordinary carpenter. We use yellow deal the width we wish the Window Garden to be. At the back is a strip of wood three inches in height, which can be higher or lower according to taste, and scalloped or plain. The front is ornamented as represented in the illustration, the structure resting upon blocks so as to raise it a quarter of an inch above the sill of the window, and with holes in the bottom for drainage. A compost is used of soil consisting of two-thirds road-scrapings, one-third loam, and if convenient an addition of leaf soil perfectly decayed. The soil is then elevated so as to be highest in the centre, or it may be worked into mounds. Into this may be introduced a few stones, or a few shells, but care should be taken that these are not made conspicuous. Then the plants should be arranged so that, looking from the window or from the outside, the effect is equally good. Between the scallops in the front a trailer should be inserted, and a Sempervivum to form a rosette between the scallops, or a little bit of rock with a Sedum or Saxifrage growing over it. When shells are introduced, we prefer a Sempervivum growing out of them, such as Montanum, or the Cobweb house-leek. Intermingling with those

low-growing plants associate Iberis, and variegated Polemonium, and any other plants which give a little elevation. For the summer, a few of the Mexican Cacti might be introduced with great effect, and when removed in the autumn, their place occupied with spring flowering plants, such as the Myosotis dissitiflora, etc.

in the autumn, their place occupied with spring flowering plants, such as the Myosotis dissitinora, etc.
Collections of Plants suitable for forming Window Gardens.
1683 200 in 200 species
ALPINE SUCCULENTS FOR GEOMETRICAL ARRANGEMENTS.
On account of their compact and exceedingly neat habit, the Sempervivums are admirably adapted. We have seen the most charming designs carried out with S. californicum, the panels filled in with close compact, growing plants, such as Antennaria, Alternanthera, and other varieties of Sempervivums, etc.; while the silvery-leaved House-leek (Sempervivum glaucum) has become as indispensable in flower garden arrangements as the Geranium or the Calceolaria: it requires the most ordinary protection of a cold frame. Californicum is perfectly hardy, and may remain in its designs summer and winter. Sempervivum montanum forms charming rosettes, while the Cobweb sempervivum (S. arachnoideum) is valuable for small designs, etc. 1690 Echevaria secunda glauca (the silvery House-leek)
1691 Echeveria metallica, 1/, 1/6, 2/, 2/6 each and upwards, according to size; per doz. 9/, 12/, 18/ & upwards.
1692 Echeverias, other species and varieties, 3/6 each and upwards. 1693 Saxifraga per 100, 63s.; per dozen, 6s., 9s., and 12 0 1694 Sedum (Stonecrop) per 100, 63s.; per dozen, 6s., 9s., and 12 0 1695 Sempervivums per 100, 63s.; per dozen, 6s., 9s., and 12 0 1696 Sempervivum californicum, for symmetrical designs invaluable. STRONG GARDEN GLOVES, 1s. 6d. to 2s. 6d. per pair; Gentlemen's, 2s. 6d. to 3s. 6d.

LADIES' GAUNTLET GARDEN GLOVES, 2s., 2s. 6d., and 3s. 6d. per pair.

WOLFF'S SOLID MARKING GARDEN PENCILS, Red, Blue, or Black, 4d. each; extra strong, 8d.

WOLFF'S SOLID MARKING GARDEN FENCILS, Red, Bule, of Black, 4d. each; extra strong, 8d.

JAPANESE BASS FOR TYING.—Being soft, it is suitable for tying the most delicate specimen plants; and being
very strong, equally adapted for general use. 2s. and 3s. per lb.; specimen bundles, 6d. and 1s.

ARCHANGEL MATS, best quality, 24s. per dozen.

ST. PETERSBURGH MATS of very good quality, 15s., 21s., and 24s. per dozen.

FRIGI DOMO NETTING.—Manufactured from hair and wool; a perfect non-conductor; keeps a fixed temperature
where it is applied. 2, 3, and 4 yards wide; 1s. 2d. per square yard.

BRITTAIN'S GARDEN NETTING.—This is a valuable material for protecting fruit-trees from frost, and it can also
be used for shading numberses. No. 1, 10 yards long, gr. inches wide, per piece, 6s. 6d.: this is manufactured

be used for shading purposes. No. 1, 10 yards long, 55 inches wide, per piece, 6s. 6d.; this is manufactured with cotton and wool. No. 2, 10 yards long, 55 inches wide, 7s. 6d. ditto; this is all wool. No. 3, 10 yards long, 55 inches wide, 9s. ditto; all wool, and heavier than No. 2.

ILLUSTRATED SHEET OF

HORTICULTURAL REQUISITES AND ELEGANCIES.

BARR'S LONDON-MADE ECONOMIC SUCTION GARDEN ENGINES.

No. 1.--TO BE WORKED BY A MAN OR A LAD.

The mechanism of our No. 1 portable Garden Engine is simple, but of the highest order. It works easily, possessing all the advantages and embracing the latest improvements in Garden Engines. It will throw a continuous stream of water 40 feet, being the greatest distance which has yet been attained by this class of Engine, so that the maximum of work may be obtained with the minimum of labour. The Engine will draw water through a 4-inch suction-hose from a distance of 60 feet, so that with the end of the pipe placed in a well, pond, or stream, a large quantity of water may soon be distributed over the garden, or used for extinguishing fires in dwelling-houses or farmyards. The value of this Engine can hardly be over-estimated for washing fruit-trees,

No. I.

No. 2.

No. 1.

No. 2.

Standard roses, syringing the conservatory, and cleansing windows. On hop-farms it will be of great service for cleansing the hops, or syringing them with tobacco-water. We have added a stuffing-box to prevent the escape of water at the handle, and have placed the waste-pipe on the off-side, so that the operator may work a whole day without wetting himself—a matter of considerable importance. An angle-joint, similar to that used in connection with our Syringe, can be applied for syringing plants from beneath, or in other positions not in a straight line from the operator. The Engine is supplied, at the price quoted, with a §-inch two-feet suction hose and strainer, and a discharge-pipe of the same diameter and length, including a jet and two roses. We may remark that the Engine, from its superior fittings and workmanship, does not readily get out of repair, and when it does so it is very easily put into working order again. Price 50s. Extra hose, 1s. 2d. per foot run.

No. 2.-TO BE WORKED BY A LADY OR A BOY.

The construction of this Engine is in all respects the same as No. 1, but with a shorter piston and smaller barrel. It will throw a continuous stream of water 30 feet, and is worked with great ease. To lady gardeners and amateurs it is a boon. Price 42s.

THE SELBY FLOWER GATHERER. It would be impossible to say too much in favour of the Selby Flower Gatherer. In its construction, the spring guide follows the action of the scissors, and thereby infallibly secures hold of what the scissors cut. 5/6 each.

In all respects, the action of the Fruit and Flower Gatherers is the same. The Fruit Gatherer, as illustrated above, is mounted on a four-foot wooden handle, and, as will be seen from the illustration, the action of the Fruit Gatherer is performed by means of a cord. 10/6 each.

BARR'S LONDON-MADE ECONOMIC GARDEN SYRINGE.

For superiority of action, strength, and finish, these high class Garden Syringes are without exception the best in the market. The bore of the barrel is perfectly true, which makes the action of the piston very easy. The packing is finished in a very superior manner, and this secures the full complement of water being drawn into the barrel, while the stuffing-box prevents its escape at the handle, and the correct boring of the rose ensures a perfectly even discharge. Thus, with these Syringes the maximum of work can be accomplished with the minimum of manual labour. All the Syringes can be fitted with the Angle-joint, as shown in No. 1, so that even a lady, in syringing her fern-case or miniature conservatory, can enjoy the full advantages of this mode of washing the plants from beneath, or in any other way where the Angle-joint is necessary.

THE PAXTON NAIL BAG, 10/6.

MEDICATED SHREDS .- These are made from webbing of various widths, and coated over with a composition which is objectionable to insects; so that while the preparation preserves the fabric, it prevents insects harbouring about the trees. The illustration gives the harbouring about the trees. sizes and widths of the different shreds.

THE IMPROVED PAXTON FU-

BARR'S NEW HEATED FRAMES

FOR RAISING SEEDS, STRIKING CUTTINGS, OR PRESERVING DELICATE PLANTS DURING THE WINTER MONTHS.

It would be impossible to over-estimate the importance and usefulness of these frames to amateurs and ladies ond of gardening, whose glass accommodation is limited. Every amateur knows how difficult it is to raise delicate or hard seeds, and to strike a supply of cuttings for the flower garden, if a suitable hot-house is not possessed. To meet this want, many heated cases have from time to time been introduced, but they were either too complicated or too troublesome. Consequently they were soon discarded.

We have made simplicity the characteristic feature of our case, being manufactured of galvanized iron, japanned green, and placed on a stand. It has a water tank, a hot-air chamber, and a lamp, but none of these are observable when the case is at work. The lamp simply requires trimming night and morning, and replenishing with oil; this is done by one of our boys. We use the best Colza oil. To give an idea of the value we put upon these cases ourselves, we test the growth of nearly all our seeds in them, although we have a forcinghouse specially for that purpose; but we find the cases do the work far better, especially with such delicate seeds as Primula, Calceolaria, etc., and such hard seeds as Acacia, Canna, etc. We have had these cases in continual operation since their introduction in the spring of 1869, and we have never experienced any unpleasant smell from the lamps, nor have had any difficulty with them. If the wick is properly trimmed, the deposit over the lamp is exceedingly trifling, and from time to time should be removed with a duster. Those who have a greenhouse will find it a good place for the case, where it will answer all the purposes of a forcing-house; and for those who have find it a good place for the case, where it will answer all the purposes of a forcing-house; and for those who have not, the sitting-room or any spare room will do. Invalids will find it a source of untiring interest if they love

The Illustration A represents the case best suited for raising seeds and striking cuttings; B is the style of case, from its greater depth, best adapted for keeping plants in during winter. Seeds may also be raised in it and cuttings struck, but not so successfully as in the more shallow case A. They are manufactured in three sizes. They can be packed to travel to any part of the country safely. We may just mention that the leading gardening papers have spoken most favourably of these cases. Space forbids our quoting their remarks, or the numerous testimonials we hold regarding them. We may add that they have had the approval of some of our heat horticulturities so that in offering these cases we feel we are advancing the science of horticulture. best horticulturists, so that in offering these cases we feel we are advancing the science of horticulture.

A. For Raising Seeds and Striking Cuttings. No. 1. 23 in. by 17 in., on Stand, 90/; on Dwarf Feet, 84/.

No. 2. 29 in. by 20 in., on Stand, 98/; on Dwarf Feet, 92/.

35 in. by 23 in., on Stand, 105/; on Dwarf Feet, 98/.

B. For Preserving Delicate Plants during Winter. No. 4. 23 in. by 17 in., on Stand, 90/; on Dwarf Feet, 84/.

No. 5. 29 in. by 20 in., on Stand, 98/; on Dwarf

Feet, 92/.
No. 6. 35 in, by 23 in., on Stand, 105/; on Dwarf Feet, 98/.

To Barr's elegant Albert Cases the same heating principle can be applied, and as they are of various sizes, to accommodate large and small window recesses, they constitute an elegant conservatory in the sitting-room.

PFERSDORFF'S FRENCH PATENT PERFORATED TUBE WATERING-Pots, for watering seed beds, etc. Each 4,6, 8/6, and 10/6.

Tubes to fit any watering-can supplied separately, 1/ to 2/6, according to size and diameter.

Brehaut's Pruning Scissors, largest size, 5/ Orchard-house,, medium size, 4/6 smallest size, 4/

It would hardly be possible to over-estimate the value of Mr. Bréhaut's scissors. They are light, and do their work better than any English or French scissors which have yet been intro-duced; cutting as clean as a knife, and the curve in the blades prevents the possibility of cutting more than is intended. To the amateur they are invaluable, while to the gardener they are a necessity. They are of various sizes, and we recommend the Rose Scissors to ladies, being the lightest,

SAYNOR'S BUDDING, PRUNING, AND GRAFTING KNIVES, WARRANTED.

Saynor's Propagating Scissors, 3/.

BARR'S WINDOW CONSERVATORY, 160/ and upwards,

RUSTIC TERRA COTTA BRACKETS, like the illustration, also with Stag's Heads, etc., 2/6, 4/6, 7/6 10/6, 12/6, 15/6, 17/6, and 21/.

Ladies' Watering Cans, with Brass Roses to screw on, 4/6, 5/6, and 6/6. With additional finer rose, 1/6 each extra. These cans we strongly recommend. The brass rose is fitted on as in the case of an ordinary syringe, and easily taken off and cleaned.

BARR'S RUSTIC TERRA COTTA BULB AND FERN JARDINETS.

When these Jardinets are required filled with bulbs, it is desirable that the orders should be sent as early in the season as possible, as they travel so much better before the plants have made any top growth. When received, if convenient, they should be placed in a cold frame till they have made some growth, before being placed in the conservatory or sitting-room window

Sufficient water should be given to keep the preparation in which

THE NE PLUS ULTRA DRAWING-ROOM JARDINET. In sizes, 3/6, 4/6, 5/6, 8/6, and 12/6. If filled with Hyacinths and other bulbs, or Hyacinths alone, 7/6, 10/6, 12/6, 21/, and 30/
